

Filter **LEAD** Out of Your Water.

Learn how to clean your water by picking the right filter.

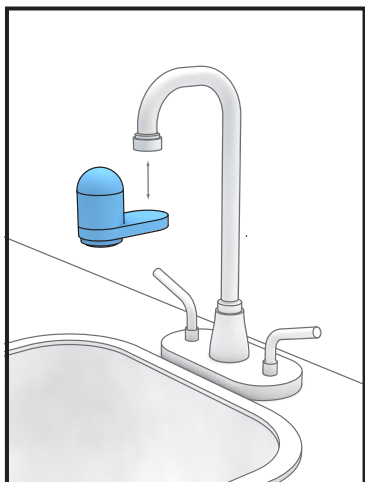

LSUHealthNewOrleans

School of Public Health

Lead in water is a problem in old homes. Small amounts of lead can cause bad health effects. Using a filter to clean your water helps to keep your family healthy.

We recommend the: ***Faucet Mount Filter***

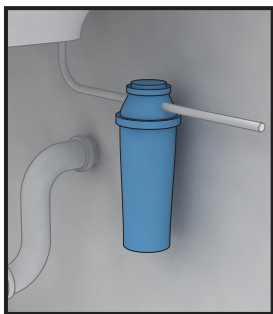

The filter connects to the faucet using an adapter.

The adapter comes with the filter.

It will easily connect to most home faucets.

Most are effective and inexpensive.

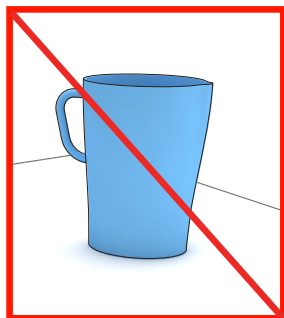

Or you can buy the ***Under-Sink Filter***

The filter connects under the sink directly to the cold or hot water line.

You might need a plumber to install this one.

Do not buy the ***Pitcher Filter***

It is hard to find a certified pitcher filter.

They do not filter lead well.

Most filters can be found at stores like:

CVS, WALGREENS, WALMART, HOME DEPOT

Some **Faucet Mount Filter** options include:

\$16.00

Brita Basic Faucet Filtration System
Model: SAFF - 100

\$20.00

PUR Basic w/ Maxion Filter Technology
Model: FM-3333B

\$26.00

Brita Complete Faucet Filtration System

\$30.00

PUR Advanced w/ Maxion Filter Technology
Model: FM-3700B

\$40.00

PUR Ultimate w/ Maxion Filter Technology
Model: FM-9000B

NOTE, PRICES ARE APPROXIMATIONS.

When buying a filter, remember to

look for these labels.

The filter should be

NSF CERTIFIED
53 or 58

The box should say that it filters
LEAD.

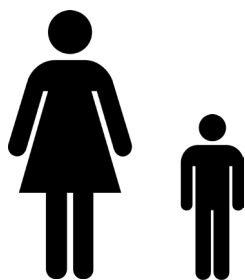

If the label does not list **LEAD**,
do not buy the filter.

There is no safe level of **LEAD.**
