

**Cancer Incidence in Louisiana by Census Tract
2005-2015**

Mission

To collect and report high-quality and timely population-based cancer data in Louisiana to support research, cancer prevention and control.

Vision

To reduce suffering and death from cancer using information collected by the Louisiana Tumor Registry.

Editors

Hospital cancer registries in Louisiana Louisiana Cancer Registrars' Association

Physicians and staff members in:

Medical records offices, Pathology laboratories, Physician offices and clinics,
Free-standing treatment facilities, Hospice programs

Host Institutions:

The Louisiana Tumor Registry sincerely thanks the following healthcare institutions for their generosity in providing a home, along with internet and other support services, to the LTR regional offices for many years:

Regions 1 & 3: LSU Board of Supervisors and LSU Health Sciences Center-New Orleans (since 1995)
Region 2: Mary Bird Perkins Cancer Center (since 1983)
Region 4: Acadiana Medical Research Foundation (since 1983)
Region 5: Mary Bird Perkins Cancer Center (since 2013)
Regions 6, 7, & 8: University of Louisiana at Monroe (since 1988)

School of Public Health, LSU Health Sciences Center–New Orleans
Louisiana Cancer Prevention and Control Programs
Louisiana Cancer and Lung Trust Fund Board
Coroners' offices
Office of Public Health, Louisiana Department of Health

Funding Agencies:

- National Cancer Institute's Surveillance, Epidemiology and End Results Program
- Centers for Disease Control and Prevention's National Program of Cancer Registries
- State of Louisiana

How to Identify Your Census Tract

The U.S. Census Bureau states that:

“Census Tracts are small, relatively permanent statistical subdivisions of a county or equivalent entity that are updated by local participants prior to each decennial census as part of the Census Bureau's Participant Statistical Areas Program.... The primary purpose of census tracts is to provide a stable set of geographic units for the presentation of statistical data.”

In this report, an eleven-digit number identifies the census tract.

1. Digits 1 and 2 are the state code. For Louisiana, this is “22.”
2. Digits 3-5 are the parish code. For example, Acadia Parish is “001.”
3. Digits 6-11 are the census tract code, as described below:

“Census Tract Codes and Numbers—Census tracts are identified by an up to four-digit integer number and may have an optional two-digit suffix; for example 1457.02 or 23 [census tract numbers on the linked maps below]. The census tract codes consist of six digits with an implied decimal between the fourth and fifth digit corresponding to the basic census tract number but with leading zeroes and trailing zeroes for census tracts without a suffix. The tract number examples above would have codes of 145702 and 002300 [digits 6-11 of the census tract codes on the report tables], respectively.”

Introduction

The Louisiana Tumor Registry (LTR) is a statewide population-based cancer surveillance program that is mandated by law to gather data on cancers occurring in Louisiana residents from in-state and out-of-state medical/health records, as well as provide cancer statistics to aid in the assessment of cancer incidence, survival rates, and other aspects of the cancer burden in Louisiana. LTR data has been used to guide statewide cancer control programs, assess the magnitude of the cancer burden in Louisiana, identify areas and populations at high risk of cancer, monitor trends in cancer incidence over time, advance clinical, epidemiologic and health services research, assess the quality and effectiveness of care, project future needs of healthcare facilities, and help set priorities for allocating health resources. Since 1996, the LTR has published 33 annual *Cancer in Louisiana* monographs, which reports cancer incidence rates in Louisiana by race, sex, cancer type, age group, and geographic area. However, due to legislative restrictions, the LTR did not publish cancer incidence data below the parish level prior to March 2018.

In 2017, during the Louisiana Regular Session, legislators passed House Bill 483 (Act No. 373), authorizing the LTR to publish cancer incidence counts and rates for individual census tracts, unless such data would disclose the identity of any person to whom the data was related, thus violating the requirements of the Health Insurance Portability and Accountability Act (HIPAA), which governs the use and disclosure of protected health information (45 CFR 164.514). In such situations, the House Bill states that the LTR may combine more years of cancer data together at the census tract level or not show the data according to the rule of the United States Cancer Statistics (USCS) publications. The first *Cancer Incidence in Louisiana by Census Tract* report was published in 2018 as a result of this House Bill.

To comply with legislative restrictions pertaining to HIPAA rules (<https://www.hhs.gov/sites/default/files/hipaa-simplification-201303.pdf>) for protecting cancer patient privacy and USCS standards (<https://www.cdc.gov/cancer/npcr/uscs/pdf/uscs-2014-technical-notes.pdf>) for generating reliable cancer incidence rates, as usual, we combined cancer data from multiple years to increase the number of census tracts meeting the publication criteria (population >20,000 and case count ≥ 16) so that their cancer incidence could be presented in this report. The methods section below explains this in more detail.

This is the second report providing rates and counts at the census tract level for all races and sexes combined. It contains data for all cancers combined, as well as for the specific cancer types (i.e., lung & bronchus, prostate, female breast, colon & rectum, kidney & renal pelvis, non-Hodgkin lymphoma, urinary bladder, melanoma of the skin, pancreas, oral cavity & pharynx, leukemia, thyroid, corpus uterus, liver & intrahepatic bile duct, and stomach). Incidence rates and counts for other cancers are not provided because even after combining multiple years of data together, the

case counts are too low and/or the population size is too small to meet the above-mentioned publication criteria.

This report includes five sections: Introduction, Methods, Results, Discussion, and Appendices. The introduction provides background information related to this report. The methods section provides information on the data sources, data verification process, and methods used for statistical analysis. The results section summarizes the major findings and focuses on census tracts with statistically significantly higher incidence rates than Louisiana. Maps have been produced to illustrate the results. The discussion section includes interpretations of the findings, as well as the limitations of registry data. [Appendix A](#) includes tables with rates and counts for all census tracts meeting the publication criteria regardless of whether their rates are statistically significantly higher than Louisiana's rates.

Methods

Data Sources

Cancer incidence data

Cancer incidence data used for this report were collected by the LTR from all healthcare facilities, both in state and out-of-state, that diagnose and/or provide treatment and care to Louisiana cancer patients. Louisiana law (R.S. 40:1105.5) requires that all hospitals, pathology laboratories, radiation centers, physicians, nursing homes, hospices, other licensed health care facilities and providers, as well as coroners' offices, report cancer cases to the LTR. Cancer data collection begins by identifying people with cancer through screening pathology reports and/or disease indexes of hospitals, outpatient clinics, radiology departments, doctors' offices, pathology laboratories, surgical centers, or from other providers who diagnose and/or treat cancer patients. LTR also links its data annually with the state's death certificate file and hospital in-patient discharge data to ensure the completeness of case ascertainment. The LTR has established interstate data exchange agreements with 43 state cancer registries and the registries of the District of Columbia and 3 United States territories to obtain data on Louisiana cancer cases diagnosed or treated at out-of-state facilities.

The LTR only collects data on reportable cancers. Reportable cancers are determined by the standard-setting organizations in the United States (U.S.), including the National Cancer Institute's Surveillance, Epidemiology, and End Results (SEER) Program, the Centers for Disease Control and Prevention's National Program of Cancer Registries (NPCR), and the American College of Surgeon's Commission on Cancer (See the NAACCR Data Standards & Data Dictionary, Chapter III: <http://datadictionary.naaccr.org/>).

The cancer types included in this report are defined based on the International Classification of Diseases for Oncology, Third Edition (ICD-O-3) (<http://codes.iarc.fr/>) and the SEER recode ICD-

O-3 (https://seer.cancer.gov/siterecode/icdo3_dwho/home/index.html). Only invasive cancer cases are included to be consistent with cancer surveillance publications.

Population data

The population data were from the 2010 U.S. Census. The census counts every resident in the U.S., making the population counts from this census relatively accurate. For the intercensal years, the U.S. Census Bureau estimates population counts based on the American Community Survey, which randomly samples a subset of the population for its annual survey (<https://www.census.gov/programs-surveys/acs/>). As a result, the estimated population counts of the intercensal years for small geographic areas, such as census tracts, are less reliable. Due to the re-drawing of some census tract boundaries from the 2000 Census to the 2010 Census, only one Census population count could be utilized. Cases diagnosed in 2005 were re-coded to the 2010 Census tract boundaries. Given that 2010 falls in the middle of the study period (2005-2015) and assuming the population increases at approximately the same rate each year, the 2010 U.S. Census population count was used as the average annual population count in this report. Cases diagnosed after 2015 are not included because the most recent, complete cancer incidence data in Louisiana is from diagnosis year 2015, which is consistent with other state cancer registries in the U.S.

Data Verification Process

Residential addresses

To produce accurate cancer incidence rates and counts at the census tract level, the first step is to geocode addresses of patients diagnosed with reportable cancers between 2005 and 2015, using the standard geocoding tool built into the LTR database. Geocoding addresses produces geographic coordinates that enable the assignment of a case to a particular census tract. The primary source of addresses in the LTR database, however, is medical records. If a patient address in the medical record is incorrect, geocoding is not possible. In addition, if a medical record only has a Post Office (PO) Box address, the cancer case could be assigned to the wrong census tract since a residential address and a PO Box for one patient may fall into different census tracts. Due to small cancer counts, any misclassification could result in either an over or underestimate of cancer incidence in some census tracts. To minimize these potential issues, the LTR devoted many resources to the identification of residential addresses for cancer cases by either verifying with healthcare facilities or manually searching online public records sources, state death records, and other databases. Because of the diligent work of the LTR staff, less than 3% of cancer cases diagnosed from 2005-2015 have no residential address in the LTR database for this report; these cases were included in the calculation of cancer incidence rates for Louisiana, but excluded from the calculation of incidence for individual census tracts.

Geocoding cancer cases from prisons and military bases

In accordance with SEER Program coding rules (<https://seer.cancer.gov/tools/codingmanuals/>), the address at the time of cancer diagnosis for prisoners is the physical address of the prison. Because prisoners were included in both the 2010 census, as well as the LTR cancer incidence counts in the census tracts where these facilities are located, geocoding based on facility address is appropriate. Caution may be necessary when interpreting these incidence rates due to the vulnerable nature of prison populations.

Cancer cases from military bases are geocoded to the address of the installation according to the standard SEER Program coding rules. However, the U.S. Census Bureau uses multi-step rules for determining the addresses of military personnel and their families. The address assignment takes into account various factors summarized in the following links:

https://www.census.gov/population/www/cen2010/resid_rules/resid_rules.html#TWELVE
https://www.census.gov/topics/population/veterans/about/faq.html#par_textimage_9

The differences in geocoding rules between the LTR and the census may result in over or under-estimating cancer incidence in census tracts with military installations ([Appendix B](#)).

Statistical Analyses

Standard protocols were used in computing cancer incidence counts and rates; only reportable invasive cancer cases were included in the count and rate calculations (with the exception of bladder cancer for which both in situ and invasive cases were included). All data analyses were conducted using SEER*Stat software (<https://seer.cancer.gov/seerstat/>).

Incidence rates

Cancer incidence rate is the number of newly diagnosed cancer cases in a specified population during the specified years, usually expressed as the number of cancers per 100,000 population.

$$\text{Incidence Rate} = \frac{\text{number of new cancers diagnosed in the specified year(s)}}{\text{Population count in the specified year(s)}} \times 100,000$$

In this report, the numerator is the number of newly diagnosed invasive cancers from 2005-2015. The denominator is the population count for the years 2005-2015, calculated by multiplying the 2010 population by 11. Because of the impact of Hurricane Katrina on Louisiana's population for July-December 2005, cases diagnosed during this 6-month period were excluded in this analysis and the appropriate adjustment to the population count (denominator) has been made as well.

Cancer incidence rates in this report were presented as age-adjusted rates which is a standard way to report cancer rates. The age adjustment allows for meaningful comparisons of cancer incidence rates across different populations by controlling for differences in the age distributions of those populations. This control is important because cancer is diagnosed more frequently among the

elderly. Age-adjusted rates are the weighted average of the age-specific rates, where the weights represent the age distribution of a standard population. The 2000 U.S. Standard Population was used in this report, which is consistent with current publications of cancer incidence rates in the U.S. The 95% confidence interval (CI) of the rate is the range around a point estimate of the rate within which the true value is likely to lie with 95% probability; the wider the 95% CI, the less precise the rate estimate.

Rate ratios

To compare the cancer incidence rate of individual census tracts with the rate for Louisiana, rate ratios are provided in the tables. For more information on the calculation of rate ratios, please visit: https://seer.cancer.gov/seerstat/WebHelp/Rate_Algorithms.htm.

$$\text{Rate Ratio} = \frac{\text{Age-adjusted incidence rate for a specific census tract}}{\text{Age-adjusted incidence rate for Louisiana}}$$

If a rate ratio is equal to 1.0, the cancer incidence rate for a specified census tract is the same as the cancer incidence rate for Louisiana. If the rate ratio is greater than 1.0, the rate for the census tract is higher than the rate for Louisiana. If the rate ratio is less than 1.0, the rate of the census tract is lower than the rate for Louisiana. We provide the individual 95% confidence interval for each rate ratio; the wider the 95% CI, the less precise the rate ratio. If the 95% CI includes 1.0 for a rate ratio, the difference between the incidence rate for the census tract and Louisiana is not statistically significant. A p-value is also provided in the tables to show whether the rate ratio is statistically significantly different from Louisiana. Typically, a p-value that is less than 0.05 indicates that the cancer incidence rate for the census tract is statistically significantly different from the state rate. Each rate comparison between the census tract and Louisiana was done individually. Because of the interests of the public, the description of findings focuses on census tracts with statistically significantly higher incidence rates when compared with Louisiana.

Results

Cancer Incidence Counts and Rates by Census Tract

Out of 1,148 census tracts in Louisiana, 943 census tracts meet the publication criteria for all cancers combined (Table 1). For specific cancer types, fewer census tracts meet the criteria. For the Louisiana census tracts meeting the criteria, their incidence rates for all cancers combined and for specific cancer types were compared with the corresponding rates for the entire state. For example, for all cancers combined, 84 census tracts had higher incidence rates and 108 census tracts had lower incidence rates than the corresponding rates for Louisiana by individual statistical tests at the significance level of 0.05. For specific cancer types, the numbers of census tracts with statistically significantly higher incidence rates as compared to the rates for Louisiana varied by cancer

type. Overall, 291 census tracts had statistically significantly higher incidence rates for all cancers combined and/or for one or more specific cancer types.

All Cancers Combined

Of the 943 census tracts meeting the publication criteria when 2005-2015 data were combined, 84 census tracts from 29 parishes had statistically significantly higher incidence rates for all cancers combined as compared with Louisiana; rate ratios varied from 1.11 to 1.60 (Table 2 and Figure 1).

Lung & Bronchus

Of the 866 census tracts meeting the publication criteria, 67 census tracts in 31 parishes had statistically significantly higher lung and bronchus cancer incidence rates than Louisiana; rate ratios varied from 1.33 to 2.12 (Table 3 and Figure 2).

Prostate

Of the 501 census tracts meeting the publication criteria, 41 census tracts in 18 parishes had statistically significantly higher prostate cancer incidence rates than Louisiana; rate ratios varied from 1.27 to 1.91 (Table 4 and Figure 3).

Female Breast

Of the 553 census tracts meeting the publication criteria, 21 census tracts in 14 parishes had statistically significantly higher female breast cancer incidence rates than Louisiana; rate ratios varied from 1.30 to 1.60 (Table 5 and Figure 4).

Colon & Rectum

Of 737 census tracts meeting the publication criteria, 51 census tracts in 29 parishes had statistically significantly higher colorectal cancer incidence rates than Louisiana; rate ratios varied from 1.38 to 2.46 (Table 6 and Figure 5).

Kidney & Renal Pelvis

Of 172 census tracts meeting the publication criteria, 20 census tracts in 15 parishes had statistically significantly higher kidney and renal pelvis incidence rates than Louisiana; rate ratios varied from 1.64 to 2.32 (Table 7 and Figure 6).

Non-Hodgkin Lymphoma

Of 128 census tracts meeting the publication criteria, 13 census tracts in 7 parishes had statistically significantly higher non-Hodgkin lymphoma incidence rates than Louisiana; rate ratios varied from 1.59 to 2.76 (Table 8 and Figure 7).

Urinary Bladder (including in situ)

Of 119 census tracts meeting the publication criteria, 19 census tracts in 14 parishes had statistically significantly higher urinary bladder incidence rates than Louisiana; rate ratios varied from 1.49 to 3.22 (Table 9 and Figure 8).

Melanoma of the Skin

Of 115 census tracts meeting the publication criteria, 67 census tracts in 17 parishes had statistically significantly higher melanoma of the skin incidence rates than Louisiana; rate ratios varied from 1.59 to 3.67 (Table 10 and Figure 9).

Pancreas

Of 16 census tracts meeting the publication criteria, 5 census tracts in 3 parishes had statistically significantly higher pancreatic cancer incidence rates than Louisiana; rate ratios varied from 1.77 to 2.16 (Table 11 and Figure 10).

Oral Cavity & Pharynx

Of 28 census tracts meeting the publication criteria, 9 census tracts in 7 parishes had statistically significantly higher oral cavity & pharynx cancer incidence rates than Louisiana; rate ratios varied from 1.84 to 2.60 (Table 12 and Figure 11).

Leukemia

Of 24 census tracts meeting the publication criteria, 5 census tracts in 5 parishes had statistically significantly higher leukemia incidence rates than Louisiana; rate ratios varied from 1.83 to 2.55 (Table 13 and Figure 12).

Thyroid

Of 19 census tracts meeting the publication criteria, 9 census tracts in 5 parishes had statistically significantly higher thyroid cancer incidence rates than Louisiana; rate ratios varied from 1.76 to 2.67 (Table 14 and Figure 13).

Corpus Uterus

Of 3 census tracts meeting the publication criteria, 2 census tracts in 1 parish had statistically significantly higher corpus uterus cancer incidence rates than Louisiana; rate ratios were 2.26 and 2.37 (Table 15 and Figure 14).

Liver & Intrahepatic Bile Duct

Of 2 census tracts meeting the publication criteria, 2 census tracts in 2 parishes had a statistically significantly higher liver and intrahepatic bile duct cancer incidence rate than Louisiana; the rate ratios were 2.11 and 2.70 (Table 16 and Figure 15).

Stomach

There is only one census tract meeting the publication criteria and the incidence rate of stomach cancer in this census tract was not statistically significantly higher than Louisiana (Figure 16).

Tables & Figures

Table 1. Number and percentage of census tracts meeting the publication criteria with statistically significantly higher or lower rates than Louisiana based on cancer cases diagnosed between 2005 and 2015.

	Average Annual Case Count in Louisiana	Census Tracts Meeting the Criteria ¹		Higher Rates		Lower Rates	
		Count ²	% ³	Count ⁴	% ⁵	Count ⁶	% ⁷

*Rates are per 100,000 and age-adjusted to the 2000 U.S. Std Population (18 age groups - Census P25-1130) standard.

#One or more military areas are located in this census tract.

Table 3. Age-adjusted cancer incidence rates by census tract, significantly higher than Louisiana, lung & bronchus, 2005-2015.

Figure 1. Comparison of Cancer Incidence Rates¹ of Individual Census Tracts with Louisiana, All Cancers Combined, 2005-2015

¹Average annual age-adjusted (2000 US) incidence rates

Figure 2. Comparison of Cancer Incidence Rates¹ of Individual Census Tracts with Louisiana, Lung & Bronchus, 2005-2015

- The rate is statistically significantly lower than Louisiana.
- The rate is not statistically significantly different from Louisiana.
- The rate is statistically significantly higher than Louisiana.
- The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2005-2015 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

Risk Factors²

- Age
- Sex
- Cigarette smoking (increases with amount and years of smoking)
- Cigar and pipe smoking
- Exposure to secondhand smoke
- Taking beta carotene supplements
- Exposure to radon gas, asbestos, certain metals (chromium, cadmium, arsenic), silica, beryllium, nickel chromate, some organic chemicals, radiation, vinyl chloride, mustard gas, coal products, or diesel exhaust
- Air pollution
- Occupational exposures, including: rubber manufacturing, paving, roofing, painting, chimney sweeping
- History of tuberculosis
- Personal or family history of lung cancer
- Radiation therapy to the chest for other cancers
- HIV infection
- Multiple endocrine neoplasia type 1 (MEN1)

¹Average annual age-adjusted (2000 US) incidence rates

²American Cancer Society, *Cancer Facts & Figures 2019*; American Cancer Society, www.cancer.org/cancer.html; National Cancer Institute, www.cancer.gov.

Figure 3. Comparison of Cancer Incidence Rates¹ of Individual Census Tracts with Louisiana, Prostate, 2005-2015

Risk Factors²

- Increased age
- African ancestry
- Smoking
- Diets high in dairy and calcium
- Excess body weight
- Taking vitamin E alone or folic acid
- Prostate changes
- Family history of prostate cancer in first-degree relative
- Certain inherited genetic conditions, including Lynch syndrome and BRCA1 and BRCA2 mutations

■ The rate is statistically significantly lower than Louisiana.

■ The rate is not statistically significantly different from Louisiana.

■ The rate is statistically significantly higher than Louisiana.

■ The census tract does not meet the requirements (population count > 20,000 and case count ≥16 for the 2005-2015 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

¹Average annual age-adjusted (2000 US) incidence rates

²American Cancer Society, *Cancer Facts & Figures 2019*; American Cancer Society, www.cancer.org/cancer.html; National Cancer Institute, www.cancer.gov.

Figure 4. Comparison of Cancer Incidence Rates¹ of Individual Census Tracts with Louisiana, Female Breast, 2005-2015

¹Average annual age-adjusted (2000 US) incidence rates

²American Cancer Society, *Cancer Facts & Figures 2019*; American Cancer Society, www.cancer.org/cancer.html; National Cancer Institute, www.cancer.gov.

Risk Factors²

- Increased age
- Race/ethnicity
- Weight gain after age of 18
- Being overweight or obese
- Physical inactivity
- Alcohol consumption
- Long menstrual history
- Never having children
- Having first child after age of 30
- Breastfeeding for less than 1 year
- Personal or family history of breast or ovarian cancer
- Inherited mutations in BRCA1, BRCA2, or other susceptibility genes
- Benign breast conditions (ex. atypical hyperplasia)
- Personal history of ductal or lobular carcinoma in situ, high-dose radiation to chest at young age, or high breast density
- Recent use of oral contraceptives
- Postmenopausal hormone use
- Long-term use of combination hormone replacement therapy
- Being given diethylstilbestrol during pregnancy, or mother having been given diethylstilbestrol during pregnancy
- Menopausal hormone therapy (combined estrogen and progestin)

Louisiana Tumor Registry

Figure 5. Comparison of Cancer Incidence Rates¹ of Individual Census Tracts with Louisiana, Colon & Rectum, 2005-2015

■ The rate is statistically significantly lower than Louisiana.

■ The rate is not statistically significantly different from Louisiana.

■ The rate is statistically significantly higher than Louisiana.

■ The census tract does not meet the requirements (population count > 20,000 and case count ≥16 for the 2005-2015 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

Risk Factors²

- Age
- Sex
- Race/ethnicity
- Obesity
- Physical inactivity
- Long-term smoking
- High consumption of red or processed meat
- Low intake of calcium, fruits, vegetables, and whole-grain fiber
- Moderate to heavy alcohol consumption
- Personal or family history of colon or rectal cancer and/or polyps
- Personal history of chronic inflammatory bowel disease, ulcerative colitis, or Crohn's disease
- Inherited genetic conditions (ex. Lynch syndrome or familial adenomatous polyposis)
- Type II diabetes
- Long-term use of nonsteroidal anti-inflammatory drugs can reduce risk

¹Average annual age-adjusted (2000 US) incidence rates

²American Cancer Society, *Cancer Facts & Figures 2019*; American Cancer Society, www.cancer.org/cancer.html; National Cancer Institute, www.cancer.gov.

Figure 6. Comparison of Cancer Incidence¹ Rates of Individual Census Tracts with Louisiana, Kidney & Renal Pelvis, 2005-2015

Yellow box: The rate is not statistically significantly different from Louisiana.

Red box: The rate is statistically significantly higher than Louisiana.

Cross-hatched box: The census tract does not meet the requirements (population count > 20,000 and case count ≥16 for the 2005-2015 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

¹Average annual age-adjusted (2000 US) incidence rates

²American Cancer Society, *Cancer Facts & Figures 2019*; American Cancer Society, www.cancer.org/cancer.html; National Cancer Institute, www.cancer.gov.

Figure 7. Comparison of Cancer Incidence Rates¹ of Individual Census Tracts with Louisiana, Non-Hodgkin Lymphoma, 2005-2015

The rate is not statistically significantly different from Louisiana.

The rate is statistically significantly higher than Louisiana.

The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2005-2015 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

Risk Factors²

- Increased age
- Sex
- Race
- Weakened immune system
- Infection with Epstein Barr virus, HIV, HTLV-1, H. pylori, or Hepatitis C virus
- Personal history of Sjogren syndrome, lupus, or rheumatoid arthritis
- Family history of lymphoma
- Chemical exposures to benzene and certain herbicides and insecticides
- Excessive body weight or diet high in fat and meats
- Radiation exposure

¹Average annual age-adjusted (2000 US) incidence rates

²American Cancer Society, *Cancer Facts & Figures 2019*; American Cancer Society, www.cancer.org/cancer.html; National Cancer Institute, www.cancer.gov.

Figure 8. Comparison of Cancer Incidence Rates¹ of Individual Census Tracts with Louisiana, Urinary Bladder, Diagnosed in 2005-2015

 The rate is not statistically significantly different from Louisiana.

 The rate is statistically significantly higher than Louisiana.

 The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2005-2015 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

Risk Factors²

- Age
- Race/Ethnicity
- Sex
- Tobacco use
- Working in the dye, rubber, chemical, metal, textile, leather, or aluminum industries
- Working as a hairdresser, machinist, printer, painter, or truck driver
- Living in a community with high levels of arsenic in the drinking water
- Bladder birth defects
- Cancer treatment with cyclophosphamide or having radiation therapy to abdomen or pelvis
- Personal or family history of bladder cancer
- Inherited genes and genetic syndromes

¹Average annual age-adjusted (2000 US) incidence rates

²American Cancer Society, *Cancer Facts & Figures 2019*; American Cancer Society, www.cancer.org/cancer.html; National Cancer Institute, www.cancer.gov.

Figure 9. Comparison of Cancer Incidence Rates¹ of Individual Census Tracts with Louisiana, Melanoma of the Skin, 2005-2015

- The rate is not statistically significantly different from Louisiana.
- The rate is statistically significantly higher than Louisiana.
- The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2005-2015 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

Risk Factors²

- Age
- Sex
- Race
- Presence of atypical, large, or more than 50 moles
- Heavy exposure to ultraviolet radiation from sunlight or indoor tanning beds
- Sun-sensitivity (fair-skinned, burning easily, or having natural blonde or red hair)
- Personal or family history of melanoma or skin cancer
- Personal history of having at least one severe, blistering sunburn in youth
- Weakened immune system
- Xeroderma pigmentosum

¹Average annual age-adjusted (2000 US) incidence rates

Figure 10. Comparison of Cancer Incidence Rates¹ of Individual Census Tracts with Louisiana, Pancreas, 2005-2015

The rate is not statistically significantly different from Louisiana.

The rate is statistically significantly higher than Louisiana.

The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2005-2015 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

Risk Factors²

- Age, Sex, Race
- Tobacco use
- Obesity
- Heavy alcohol consumption
- Family history of pancreatic cancer
- Personal history of chronic pancreatitis or diabetes
- Personal history of Lynch syndrome or certain other genetic syndromes
- BRCA1, BRCA2, and PALB2 gene mutation carrier
- Type II Diabetes
- Heavy occupation exposure to chemicals used in dry cleaning and metal working industries

¹Average annual age-adjusted (2000 US) incidence rates

Discussion

For the 2005-2015 combined cancer incidence data, LTR identified that one-fourth of the census tracts in Louisiana had statistically significantly higher incidence rates for all cancers combined and/or for one or more specific cancer types. When an area is identified as having a higher cancer incidence rate, usually an indication of higher cancer risk, the next question normally is “why?” We need to take into account various components in order to begin answering this question. First, we need an understanding that cancer is a generic term used to describe a group of related diseases and that elevated incidence is most often attributable to multiple factors. The causes of cancer vary greatly by cancer type ([Appendix C](#)). Some factors are non-modifiable, meaning we cannot change them, such as age, race, and certain cancer-related genes. Others are modifiable factors, meaning we can take measures to change or avoid them. The American Association for Cancer Research (AACR) reports that the top modifiable risk factors are tobacco, obesity, alcohol, ultraviolet radiation, poor diet, infections, and physical inactivity ([Appendix D](#)). Avoiding these modifiable risk factors will help reduce cancer risk and is often referred to as primary prevention.

Because some cancer risk factors are not modifiable, some people will develop cancer regardless. The strategy for secondary prevention is adhering to cancer screening guidelines to identify non-cancer growths, such as precancerous lesions that may increase the risk of cancer, and to detect cancer in its early stages. For example, most colorectal cancers begin as a polyp on the inner lining of the colon or rectum. Some types of polyps can develop into cancer over several years. If people comply with cancer screening guidelines to detect and remove polyps, colorectal cancer can be prevented. Another example is the Pap smear, which can detect abnormal cells on the cervix that may develop into cervical cancer if left untreated.

The LTR is the entity that counts and publishes cancer data in the state. To determine what caused a higher incidence rate in an area, scientists will need to conduct an investigation or a research study to quantify the contribution of individual risk factors. Such investigations or studies require collection of detailed data from individual residents in the area on their exposures to all known risk factors. These factors include lifestyle, diet, family history of cancer, environmental exposure, and much more. Because cancer development takes years, the data on risk factor exposure must be longitudinal. Therefore, such a retrospective investigation is very costly. Once the LTR reports cancer incidence data in an area, the Louisiana Office of Public Health (OPH) is responsible for conducting a preliminary evaluation of any areas of concern and any needed feasibility studies, as well as making a determination about whether there is a need to perform an etiological investigation.

The cancer incidence rate indicates the average cancer risk of the residents in an area. While LTR data may show that cancer incidence rates in a census tract are not statistically higher than Louisi-

ana, there may be individuals in that census tract that are at an increased risk of cancer. Additionally, even after combining 11 years of data together, the population and cancer incidence counts are still relatively small. Thus, the power to identify statistically significantly higher incidence rates as compared with Louisiana is limited. In other words, the ability of the statistical test to determine whether a rate is significantly higher is dependent upon the size of the population and cancer incidence counts. When these numbers are small, it is difficult to prove that the increased cancer incidence rate was not due to chance.

Several limitations of the registry data used for this report need to be disclosed.

- 1) Because we did not have population estimates based on the counting of every resident for the intercensal years, the single-year population count from the 2010 Census was used for all years included in the report, which may over or underestimate populations for some census tracts.
- 2) There were 3% of cancer cases excluded from the calculation of cancer incidence rates at the census tract level due to addresses that cannot be geocoded, which may result in the underestimation of cancer incidence for some census tracts.
- 3) The LTR relies on other state cancer registries to provide cancer data on Louisiana residents who were diagnosed or treated at out-of-state facilities. There is no way to ascertain the completeness of reporting from facilities outside of Louisiana.
- 4) Complete ascertainment of all reportable cancer cases is the priority of the LTR. While healthcare facilities and providers are obligated by law to report all cancer cases that they diagnosed and/or treated, LTR staff are also actively involved in case-finding activities, especially for hospitals without a cancer registry and non-hospital settings. Using electronic pathology reporting, which covers over 90% of cancer cases, and other quality assurance activities, the LTR is able to capture the majority of missed cases and achieve the 98% completeness benchmark set by the SEER Program. However, because of small case counts in the individual census tracts, missing just a few cases may bias the statistical results.
- 5) Because of small case counts, reliable cancer incidence rates and counts stratified by race and gender at the census tract level are not produced. Cancer incidence rates vary by population characteristics such as race and sex. For example, men usually have a higher rate than women, and rates of some types of cancer are much higher in certain race groups. Therefore, differences in cancer incidence rates for all races and both genders combined between individual census tracts and the state may be partially attributable to the variations in population characteristics.

Due to the above-mentioned limitations, few state cancer registries in the U.S. publish cancer incidence rates at the census tract level. We encourage users to be cautious in use and further interpretation of data included in this report and strongly suggest that they consult with epidemiologists and biostatisticians to avoid misinterpretation. For example, rate comparisons between each census tract and Louisiana were conducted individually. However, if conducting multiple comparisons

simultaneously, the overall type I error rate needs to be controlled. The priority of the LTR is to collect and provide high-quality and complete data to guide cancer control programs in their efforts to reduce the cancer burden in Louisiana. To achieve this goal, healthcare facilities and providers are encouraged to continue to report all cancer cases to the LTR as every case is of utmost importance to produce accurate data at the census tract level.

Appendix C. Risk Factors by Cancer Type

Top Cancer Types in Louisiana	Non-Modifiable Risk Factors	Modifiable Risk Factors
Lung and bronchus	• Age • Sex • Personal or family history of lung cancer • Multiple endocrine neoplasia type 1 (MEN1), an inherited syndrome • Radiation therapy to the chest for other cancers • HIV infection	• Cigarette smoking (increases with amount and years of smoking) • Cigar and pipe smoking • Exposure to secondhand smoke • Taking beta carotene supplements • Occupational exposures, including: rubber manufacturing, paving, roofing, painting, chimney sweeping • Exposure to radon gas, asbestos, certain metals (chromium, cadmium, arsenic), silica, beryllium, nickel chromate, some organic chemicals, radiation, vinyl chloride, mustard gas, coal products, or diesel exhaust • Air pollution
Prostate	• Increased age (rises rapidly after age 50) • Race/Ethnicity: African ancestry • Family history of prostate cancer in first-degree relative • Certain inherited genetic conditions, including Lynch syndrome and BRCA1 and BRCA2 mutations • Prostate changes	• Smoking • Taking vitamin E alone or folic acid • Diets high in dairy and calcium • Excess body weight
Female breast	• Increased age • Race/ethnicity • Long menstrual history (starting early and ending later in life) • Inherited mutations in BRCA1, BRCA2, or other susceptibility genes • Personal or family history of breast or ovarian cancer • Benign breast conditions (ex. atypical hyperplasia) • Personal history of ductal or lobular carcinoma in situ, high-dose radiation to chest at young age, benign breast disease, or high breast density	• Weight gain after age of 18 • Being overweight or obese • Physical inactivity • Alcohol consumption • Recent use of oral contraceptives • Long-term use of combination hormone replacement therapy • Postmenopausal hormone use • Never having children • Having first child after age of 30 • Breastfeeding for less than 1 year • Menopausal hormone therapy (combined estrogen and progestin)

Top Cancer Types in Louisiana	Non-Modifiable Risk Factors	Modifiable Risk Factors
	Being given diethylstilbestrol during pregnancy, or mother having been given diethylstilbestrol during pregnancy	
Colon & Rectum	- Age - Sex - Race/ethnicity - Personal or family history of colon or rectal cancer and/or polyps - Personal history of chronic inflammatory bowel disease, ulcerative colitis, Crohn's disease, or ovarian cancer - Inherited genetic conditions (ex. Lynch syndrome, familial adenomatous polyposis, or hereditary nonpolyposis colon cancer) - Type II diabetes	- Obesity - Physical inactivity - Long-term smoking - Moderate - heavy alcohol consumption - High consumption of red or processed meat - Low intake of calcium, fruits, vegetables and whole-grain fiber - Long-term use of nonsteroidal anti-inflammatory drugs can reduce risk
Kidney & Renal Pelvis	- Family history of kidney cancer - Von-Hippel Lindau syndrome - Chronic renal failure	- Obesity - Tobacco use - High blood pressure - Occupational exposure to chemicals like trichloroethylene (organic solvent) or cadmium, or herbicides - Certain medicines: Phenacetin & Diuretics
Non-Hodgkin Lymphoma	- Increased age - Sex - Race-ethnicity - Family history of lymphoma in first degree relative - Weakened immune system due to HIV infection, inherited immunodeficiency syndromes, or receiving immune suppressants to prevent organ transplant rejection - Personal history of Sjogren syndrome, lupus, or rheumatoid arthritis	- Infection with Epstein Barr virus, HIV, HTLV-1, H. pylori, or Hepatitis C virus - Chemical exposures to benzene and certain herbicides and insecticides - Excessive body weight or diet high in fat and meats - Radiation exposure
Urinary Bladder	- Bladder birth defects or long-term urinary catheters - Personal or family history of bladder cancer - Race-ethnicity - Age - Sex (men>women)	- Tobacco use - Cancer treatment with cyclophosphamide or having radiation therapy to abdomen or pelvis - Working in the dye, rubber, chemical, metal, textile, leather or aluminum industries

Top Cancer Types in Louisiana	Non-Modifiable Risk Factors	Modifiable Risk Factors
	- Inherited genes (GST and NAT) - Inherited genetic syndromes (retinoblastoma, Cowden Disease, Lynch Syndrome)	- Working as a hairdresser, machinist, printer, painter, or truck driver - Living in a community with high levels of arsenic in the drinking water - Diabetes medicine, pioglitazone (Actos), linked to increase risk of bladder cancer with higher dosage - Dietary supplement containing aristolochic acid - Lack of fluid intake (water)
Melanoma of the Skin	- Age - Sex - Race - Presence of atypical, large, or more than 50 moles - Sun-sensitivity (fair-skinned, burning easily, or having natural blonde or red hair, blue or green eyes) - Personal or family history of melanoma or skin cancer - Weakened immune system due to HIV infection, certain cancers or taking immune suppressants to prevent organ transplant rejection - Inherited condition, Xeroderma pigmentosum (rare, affect skin cells' ability to repair damage to their DNA)	- Heavy exposure to ultraviolet radiation from sunlight or indoor tanning beds - Personal history of having at least one severe, blistering sunburn in youth
Pancreas	- Age (older than 45 years) - Sex (men>women) - Race (African Americans more likely than whites) - Personal history of chronic pancreatitis or diabetes - Personal history of certain genetic syndromes - Inherited Lynch Syndrome (defective MLH1 OR MSH2 genes) and Peutz-Jeghers Syndrome (STK11 gene defect) - BRCA1 and BRCA2 and PALB2 gene mutation carrier - Family history of pancreatic cancer - Type II Diabetes	- Tobacco use - Obesity - Heavy alcohol consumption - Heavy occupation exposure to chemicals used in dry cleaning and metal working industries
Oral Cavity & Pharynx	- Age (>55y/o) - Sex (men > women) - Personal history of oral cavity and pharynx cancer	- Tobacco use - Excessive alcohol use - Sun exposure - HPV infection of mouth and throat

Top Cancer Types in Louisiana	Non-Modifiable Risk Factors	Modifiable Risk Factors
	• Weaken immune system caused by AIDS or medicines for organ transplants • Inherited genetic syndromes: Fanconi anemia or Dyskeratosis congenita	• Betel nut use (chewing) • Poor nutrition/diet low in fruits and vegetables • Graft-vs-host disease: stem cell transplant using grafts
Leukemia	• Age • Sex (men>women) <i>The following risk factors are specific to the subtype:</i> ○ <u>Acute lymphocytic leukemia (ALL)</u>: race/ethnicity, inherited genetic syndromes, HTLV-1 infection, EBV infection, family history of ALL ○ <u>Acute myeloid leukemia (AML)</u>: blood disorders, inherited genetic disorders, family history of AML ○ <u>Chronic lymphocytic leukemia (CLL)</u>: family history of CLL, race/ethnicity, exposure to agent or-ange	• Exposure to ionizing radiation • Occupational exposure to benzene or ethylene oxide (oil refining or rubber manufacturing occupations) • Exposure to chemotherapy treatment • Obesity • Radiation therapy <i>The following risk factors are specific to the subtype:</i> ○ <u>Acute lymphocytic leukemia (ALL)</u>: parental smoking before or after birth, radiation exposure ○ <u>Acute myeloid leukemia (AML)</u>: tobacco use, parental smoking before or after birth, exposure to certain chemicals, such as formaldehyde ○ <u>Chronic lymphocytic leukemia (CLL)</u>: radon exposure at home
Thyroid	• Sex (women>men) • Age • Family history of thyroid cancer from first-degree relatives • Certain genetic conditions, such as <i>RET</i> gene mutation or familial adenomatous polyposis (FAP) • Hereditary diseases such as Cowden Disease, Carney complex Type I • Personal history of goiter or thyroid nodules	• Obesity • Exposure to ionizing radiation early in life • Diet low in iodine
Corpus Uterus	• Age • Race • Long menstrual history • Family history of uterine or colorectal cancer • Personal history of Lynch syndrome • Endometrial hyperplasia	• Obesity and abdominal fatness • Insufficient physical activity • Increased estrogen exposure through: ○ use of postmenopausal estrogen ○ late menopause ○ never having children

Top Cancer Types in Louisiana	Non-Modifiable Risk Factors	Modifiable Risk Factors
	• Type II Diabetes • Inherited conditions: Polycystic ovary syndrome and Cowden syndrome	• history of polycystic ovary syndrome • Use of Tamoxifen to prevent or treat breast cancer • Metabolic syndrome • Never being pregnant
Liver & Intrahepatic Bile Duct	• Sex (men>women) • Race/ethnicity • Non-alcoholic steatohepatitis (NASH) • Genetic conditions: Hereditary Hemochromatosis (HH), Tyrosinemia, Alpha1-antitrypsin deficiency, Porphyria cutanea tarda, Glycogen storage disease, Wilson disease • Type II Diabetes	• Tobacco use • Heavy alcohol consumption • Obesity • Chronic Hepatitis B virus or Hepatitis C virus infections • Exposure to aflatoxin B1, vinyl chloride, or thorium dioxide • Anabolic steroids • Arsenic in drinking water • Parasitic infection
Stomach	• Sex (men > women) • Age • Race/ethnicity • Geography • Genetic conditions: Type A blood, Li-Fraumeni syndrome, FAP, Lynch Syndrome, Menetrier disease, Peutz-Jeghers syndrome • Family history of first-relative stomach cancer • Inherited gene defects of <i>BRCA1</i>, <i>2</i> • Vitamin B12 deficiency (Pernicious anemia) • Common Variable Immune Deficiency (CVID) • Medical conditions: H. Pylori infection, intestinal metaplasia, chronic atrophic gastritis, pernicious anemia, stomach (gastric) polyps	• Tobacco use • Overweight, obese • Previous stomach surgeries • Diet low in fruits and vegetables, high in salted or smoked foods, high in poorly stored or prepared foods, or high in pickled vegetables • Exposure to nitrates and nitrites in cured meats • Exposure to radiation • Occupational environment of rubber or coal industry • Epstein-Barr virus infection
