

Cancer Incidence in Louisiana by Census Tract  
2013-2022

## Mission

To collect and report complete, high-quality, and timely population-based cancer data in Louisiana to support cancer research, control, and prevention.

## Vision

To reduce suffering and death from cancer using information collected by the Louisiana Tumor Registry.

# Acknowledgments

As with all reports produced by the Louisiana Tumor Registry (LTR), much appreciation goes to those whose dedication and hard work assist in the timely collection of high-quality data. The LTR sincerely thanks:

## **Central Office Staff Members**

Lili Bao, MD, MS, ODS-C  
Anna Brewer, BS, RHIA, ODS-C  
Mary Davidson, RN, BSN, MN, ODS-C  
Gregory Esteven, BA  
Natalie Gomez, RN  
Betty Gonzales, MBA  
Arnold Kwanbunbumpen, MBA  
Mary Anne LeBlanc, MPH  
Lisa Moses, PhD, MSW, MPH, MS  
Reem Muhsen, BA  
Nektarios Pappas, MD, ODS-C  
Lisa Pareti, BS, RHIT, ODS-C  
Lisa Peterson, BS, RHIT, ODS-C  
Tracie Shroeder, BS

## **Louisiana Tumor Registry Regional Directors, Managers, and Coordinators**

Angela Crossgrow, ODS-C, Manager, Regions 1 & 3  
Laura Dunaway, ODS-C, Director, Regions 2 & 5  
Lea Guidry, RHIA, ODS-C, Director, Regions 4 & 6  
Candace Crowe, ODS-C, Director, Regions 7–8, and Coordinator, Region 7  
Cindy Martin, RHIA, ODS-C, Assistant Director, Regions 7–8  
Paula Franklin, ODS-C, Coordinator, Region 8

## **Regional Registrars and Staff Members of the Louisiana Tumor Registry**

### **Hospital Cancer Registries in Louisiana Louisiana Cancer Registrars' Association**

#### **Physicians and staff members in:**

Hospitals, Pathology laboratories, Physician offices and clinics,  
Free-standing treatment facilities, Hospice programs, and their associated medical records departments

#### **Host Institutions:**

The Louisiana Tumor Registry sincerely thanks the following healthcare institutions for their generosity in providing a home, along with IT and support services, to the LTR regional offices for many years:

Regions 1 & 3: LSU Board of Supervisors and LSU Health Sciences Center-New Orleans (since 1995)

Region 2: Mary Bird Perkins Cancer Center (since 1983)

Region 4: Acadiana Medical Research Foundation (since 1983)

Region 5: Mary Bird Perkins Cancer Center (since 2013)

Region 6: University of Louisiana at Monroe (1988-2022); Acadiana Medical Research Foundation (since 2023)

Regions 7 & 8: University of Louisiana at Monroe (since 1988)

**School of Public Health, LSU Health Sciences Center–New Orleans**  
**Louisiana Cancer Prevention and Control Programs**  
**Louisiana Cancer Advisory Board**  
**Louisiana Cancer Research Center**  
**LSU LCMC Health Cancer Center**  
**Coroners' offices**  
**Office of Public Health, Louisiana Department of Health**

**Funding Agencies:**

- National Cancer Institute's Surveillance, Epidemiology, and End Results Program
- Centers for Disease Control and Prevention's National Program of Cancer Registries
- State of Louisiana

## How to Identify Your Census Tract

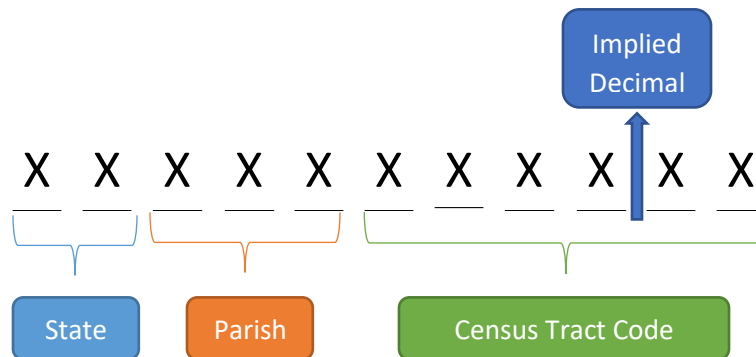

The U.S. Census Bureau states that:

“**Census Tracts** are small, relatively permanent statistical subdivisions of a county or equivalent entity that are updated by local participants prior to each decennial census as part of the Census Bureau's Participant Statistical Areas Program. [...] The primary purpose of census tracts is to provide a stable set of geographic units for the presentation of statistical data.”

In this report, we utilized the census tract definitions defined by the 2010 Census. An eleven-digit number identifies the census tract.

1. Digits 1 and 2 are the state code. For Louisiana, this is “22.”
2. Digits 3-5 are the parish code. For example, Acadia Parish is “001.”
3. Digits 6-11 are the census tract code, as described below:

“**Census Tract Codes and Numbers**—Census tracts are identified by an up to four-digit integer number and may have an optional two-digit suffix; for example, 1457.02 or 23 [census tract numbers on the linked maps below]. The census tract codes consist of six digits with an implied decimal between the fourth and fifth digit corresponding to the basic census tract number but with leading zeroes and trailing zeroes for census tracts without a suffix. The tract number examples above would have codes of 145702 and 002300 [digits 6-11 of the census tract codes on the report tables], respectively.”

## Introduction

The Louisiana Tumor Registry (LTR) is a statewide, population-based cancer surveillance program mandated by law to collect data on cancers occurring in Louisiana residents from in-state and out-of-state medical/health records, as well as to provide cancer statistics to aid in the assessment of cancer incidence, survival rates, and other aspects of the cancer burden in Louisiana. LTR data has been used to (1) guide statewide cancer control programs, (2) assess the magnitude of the cancer burden in Louisiana, (3) identify areas and populations at high risk of cancer, (4) monitor trends in cancer incidence over time, (5) advance clinical, epidemiologic and health services research, (6) evaluate the quality and effectiveness of health care, (7) project future needs of healthcare facilities, and (8) aid in setting priorities for allocating health resources. Since 1996, the LTR has published 40 annual *Cancer in Louisiana* monographs, which includes cancer incidence and mortality rates in Louisiana by race, sex, cancer type, and geographic area (region and parish). However, due to legislative restrictions, the LTR did not publish cancer incidence data below the parish level prior to March 2018.

In 2017, during the Louisiana Regular Session, legislators passed House Bill 483 (Act No. 373), authorizing the LTR to publish cancer incidence counts and rates for individual census tracts, unless such data would disclose the identity of any person to whom the data was related, thus violating the requirements of the Health Insurance Portability and Accountability Act (HIPAA), which governs the use and disclosure of protected health information (45 CFR 164.514). In such situations, the House Bill states that the LTR may combine more years of cancer data together at the census tract level or not show the data according to the rule of the United States Cancer Statistics (USCS) publications. As a result of this House Bill, LTR published its first *Cancer Incidence in Louisiana by Census Tract* report in March 2018. Since then, LTR has published this report annually using newly available data. This report is the ninth cancer incidence report published by the LTR at the census tract level.

To comply with legislative restrictions pertaining to HIPAA rules (<https://www.hhs.gov/sites/default/files/hipaa-simplification-201303.pdf>) for protecting cancer patient privacy and USCS standards (<https://www.cdc.gov/united-states-cancer-statistics/technical-notes/suppression.html>) for generating reliable cancer incidence rates, as usual, we combined cancer data from multiple years to increase the number of census tracts meeting the publication criteria (population >20,000 and case count  $\geq 16$ ) so that their cancer incidence could be presented in this report. The methods section below explains this in more detail.

This report contains the cancer incidence data for diagnosis years 2013 through 2022 for all cancers combined, as well as for the specific cancer types (i.e., prostate, female breast, lung & bronchus, colon & rectum, kidney & renal pelvis, non-Hodgkin lymphoma, urinary bladder, melanoma of the skin, pancreas, leukemia, oral cavity & pharynx, thyroid, corpus uterus, liver & intrahepatic

bile duct, multiple myeloma, and stomach). Incidence rates and counts for other cancers are not provided because, even after combining ten years of data, the case counts are too low and/or the population size is too small to meet the publication criteria mentioned above.

This report includes five sections: Introduction, Methods, Results, Discussion, and Appendices. The introduction provides background information related to this report. The methods section provides information on the data sources, data verification process, and methods used for statistical analysis. The results section summarizes the major findings and focuses on census tracts with statistically significantly higher incidence rates than Louisiana. We also produced maps to illustrate the results. The discussion section includes interpretations of the findings, as well as the limitations of registry data. [Appendix A](#) includes tables with rates and counts for all census tracts meeting the publication criteria regardless of whether their cancer incidence rates are statistically significantly higher than Louisiana's rates.

## Methods

### Data Sources

#### Cancer incidence data

Cancer incidence data used for this report, diagnosis years 2013-2022, were collected by the LTR from all healthcare facilities, both in state and out-of-state, that diagnose and/or provide treatment and care to Louisiana cancer patients. Louisiana law (R.S. 40:1105.5) requires that all hospitals, pathology laboratories, radiation centers, physicians, nursing homes, hospices, other licensed health care facilities and providers, as well as coroners' offices, report cancer cases to the LTR. Cancer data collection begins by identifying people with cancer through screening pathology reports and/or disease indexes of hospitals, outpatient clinics, radiology departments, doctors' offices, pathology laboratories, surgical centers, or from other providers who diagnose and/or treat cancer patients. The LTR also links its data annually with the state's death certificate file and the statewide hospital in-patient discharge data to ensure the completeness of case ascertainment. The LTR has established interstate data exchange agreements with 45 state cancer registries and the registries of the District of Columbia, 3 United States (U.S.) territories, and Bermuda to obtain data on Louisiana residents whose cancers were diagnosed and/or treated at out-of-state facilities.

The LTR only collects data on reportable cancers. Reportable cancers are determined by the standard-setting organizations in the U.S., including the North American Association of Central Cancer Registries (NAACCR), National Cancer Institute's Surveillance, Epidemiology, and End Results (SEER) Program, the Centers for Disease Control and Prevention's National Program of Cancer Registries (NPCR), and the American College of Surgeon's Commission on Cancer (See the NAACCR Data Standards & Data Dictionary: <https://apps.naacr.org/data-dictionary>).

The cancer types included in this report are defined based on the International Classification of Diseases for Oncology, Third Edition (ICD-O-3) (<https://apps.who.int/iris/handle/10665/96612>) and the SEER recode ICD-O-3 ([https://seer.cancer.gov/siterecode/icdo3\\_dwhohome/index.html](https://seer.cancer.gov/siterecode/icdo3_dwhohome/index.html)). Only invasive (malignant) cancer cases as defined by SEER's behavior recode for analysis (<https://seer.cancer.gov/behavrecode/>) are included to be consistent with cancer surveillance monographs in the U.S.

This report does not include cancer cases diagnosed after 2022 because the most current analytic dataset with census tract-level population data is available only through 2022. Our data's timeliness is consistent with state cancer registries across the U.S.

### Population data

For our census tract reports published in [2018](#) and [2019](#), we used population counts from the 2010 U.S. Census. However, given that the Census data is the population of a single year (2010), it became evident that more dynamic population estimates were needed to better reflect population growth in the years following 2010.

The population data used for this report, as well as our census tract reports in [2020](#), [2021](#), [2022](#), [2023](#), [2024](#), and [2025](#) were from Woods & Poole Economics, Inc. Woods & Poole provides annual population estimates for each census tract. After consulting with experts from the National Cancer Institute and conducting a preliminary analysis, the Woods & Poole population data were determined to be suitable for generating reliable cancer incidence rates at the census tract level. More information on these population estimates can be found here: <https://seer.cancer.gov/censustract-pops/>.

Woods & Poole population estimates for postcensal years (2010-2023) are based on the 2010 Census geographies and assume that the population proportion by age, gender, and race by tract in a particular parish would remain constant. *[Note: Population estimates for the 2010 geographies based on the 2020 Census were not available at the time this report was prepared (March 2026).]* A more detailed explanation of the methodology behind these population estimates can be found in a [technical report](#) titled "Methods for Estimating Intercensal (2000 to 2009) and Postcensal (2010 to 2023) Residential Population by Census Tract."

### Data Verification Process

#### Residential addresses

To produce accurate cancer incidence rates and counts at the census-tract level, the first step is to geocode patients' addresses at the time of diagnoses with reportable cancers, using the standard geocoding tool (<http://geoservices.tamu.edu/Services/Geocode/>) built into the LTR database. Ge-

ocoding converts addresses into geographic coordinates, enabling the assignment of cases to particular census tracts. Medical records are the primary source for obtaining a patient's address at the time of his/her cancer diagnosis. If a patient's address in the medical record is incorrect, the generated geographic coordinates will not be accurate. In addition, if a medical record has only a Post Office (PO) Box address, the cancer case could be assigned to an incorrect census tract, because a residential address and a PO Box for one patient may fall into two different census tracts. Due to small cancer counts in some census tracts, any misclassification could result in either an overestimation or an underestimation of cancer incidence in some census tracts. To minimize these potential issues, the LTR dedicated substantial resources to identifying residential addresses at the time of cancer diagnosis, which was accomplished through verification with healthcare facilities or manually searching online public records, state death records, and other databases. Because of the diligent work of the LTR team, only 1.14% of cancer cases diagnosed from 2013-2022 do not have a residential address in the LTR database for this report; these cases were included in the calculation of cancer incidence rates for the state of Louisiana but excluded from the calculation of incidence for individual census tracts.

#### Geocoding cancer cases from prisons and military bases

In accordance with SEER Program coding rules (<https://seer.cancer.gov/tools/codingmanuals/>), the address at the time of cancer diagnosis for a prisoner is the physical address of the prison. The Census Bureau counts individuals where they live and sleep most of the time. Because prisoners diagnosed with cancers were included in both the 2010 Census and the LTR cancer incidence counts in the census tracts where these facilities are located, geocoding based on the prison address is appropriate. Caution may be necessary when interpreting these incidence rates due to the vulnerable and cluster natures of prisoners.

Cancer cases from military bases are geocoded to the address of the installation according to the standard SEER Program coding rules ([https://seer.cancer.gov/manuals/2018/SPCSM\\_2018\\_main-doc.pdf](https://seer.cancer.gov/manuals/2018/SPCSM_2018_main-doc.pdf); Section III, pg. 33-34). However, the U.S. Census Bureau uses multi-step rules for determining the addresses of military personnel and their families. The address assignment takes into account various factors summarized in the following links:

<https://www.census.gov/programs-surveys/decennial-census/decade/2010/about-2010/residence-rule.html>

[https://www.census.gov/topics/population/veterans/about/faq.html#par\\_textimage\\_9](https://www.census.gov/topics/population/veterans/about/faq.html#par_textimage_9)

The differences in geocoding rules between SEER and the U.S. Census may result in over or underestimating cancer incidence in census tracts with military installations ([Appendix B](#)).

## Statistical Analyses

Standard protocols were used in computing cancer incidence counts and rates; only reportable invasive cancer cases were included in the count and rate calculations (with the exception of bladder cancer for which both in situ and invasive cases were included).<sup>1</sup> All data analyses were conducted using SEER\*Stat software (<https://seer.cancer.gov/seerstat/>) and the following database:

*SEER\*Stat Database: LTR Census Tract 2013-2022 - Linked To Census Tract Attributes Census 2010 Geographies Time Dependent (2008-2017). Created on 2/10/2026. Population Data Source: Woods & Poole Economics, Inc. Washington, D.C. Copyright 2025.*

### Incidence rates

A crude cancer incidence rate is defined as the number of newly diagnosed cancer cases in a specified population during the specified years, usually expressed as the number of cancers per 100,000 persons.

$$\text{Incidence Rate} = \frac{\text{number of new cancers diagnosed in the specified year(s)}}{\text{Population count in the specified year(s)}} \times 100,000$$

In this report, cancer incidence rates are presented as age-adjusted rates, which is a standard way to report cancer rates. Age adjustment allows for meaningful comparisons of cancer incidence rates across different census tracts by controlling for differences in age distributions of the populations. This control is important because cancer is diagnosed more frequently among the elderly. Age-adjusted rates are the weighted average of the age-specific rates, where the weights represent the age distribution of a standard population. The age-specific rates in this report represent the number of newly diagnosed invasive cancers between 2013 and 2022 for a specific age group, divided by the sum of the population estimates for that age group over the same period from Woods & Poole Economics, which are extrapolated from the 2010 Census. The 2000 U.S. Standard Population was used to calculate the age-adjusted rates, which is consistent with current publications of cancer incidence rates in the U.S. The 95% confidence interval (CI) of the rate is the range around a point estimate of the rate within which the true value is likely to lie with 95% probability; the wider the 95% CI, the less precise the rate estimate.

### Rate ratios

To compare the cancer incidence rate of individual census tracts with the rate for Louisiana, rate ratios are provided in the tables. For more information on the calculation of rate ratios, please visit: <https://seer.cancer.gov/help/seerstat/equations-and-algorithms/rate-algorithms>.

---

<sup>1</sup> Bladder carcinoma in situ behaves more aggressively than in situ lesions in other organs, thus it is typically combined with invasive bladder cases for statistics.

$$\text{Rate Ratio} = \frac{\text{Age-adjusted incidence rate for a specific census tract}}{\text{Age-adjusted incidence rate for Louisiana}}$$

If a rate ratio is equal to 1.0, the cancer incidence rate for a specified census tract is the same as the cancer incidence rate for Louisiana. If the rate ratio is greater than 1.0, the rate for the census tract is higher than the rate for Louisiana. If the rate ratio is less than 1.0, the rate of the census tract is lower than the rate for Louisiana. We provide the individual 95% confidence interval for each incidence rate ratio; the wider the 95% CI, the less precise the rate ratio. If the 95% CI includes 1.0 for a rate ratio, the difference in the incidence rate between the census tract and Louisiana is not statistically significant. A p-value is also provided in the tables to show whether the rate ratio differs statistically significantly from Louisiana at the 0.05 level of significance. Typically, a p-value less than 0.05 indicates that the cancer incidence rate for the census tract differs statistically significantly from the state rate. Each rate comparison between the census tract and Louisiana was done individually. Because of the interests of the public, the description of findings focuses on census tracts with statistically significantly higher incidence rates when compared with Louisiana.

## Results

### Cancer Incidence Counts and Rates by Census Tract

Out of the 1,148 census tracts in Louisiana, 931 census tracts meet the publication criteria for all cancers combined (Table 1). For specific cancer types, fewer census tracts meet the criteria. For the Louisiana census tracts meeting the criteria, their incidence rates for all cancers combined and for specific cancer types were compared with the corresponding rates for the entire state. For example, for all cancers combined, 162 census tracts (17.4%) had higher incidence rates, and 104 census tracts (11.2%) had lower incidence rates than the corresponding rates for Louisiana based on individual statistical tests at the significance level of 0.05. The number of census tracts with statistically significantly higher incidence rates as compared to the rates for Louisiana varied by specific cancer type. Overall, 353 census tracts had statistically significantly higher incidence rates for all cancers combined and/or for one or more specific cancer types.

#### All Cancers Combined

Of the 931 census tracts meeting the publication criteria when invasive cancer cases diagnosed between 2013 and 2022 were combined, 162 census tracts from 42 parishes had statistically significantly higher incidence rates for all cancers combined as compared with Louisiana; rate ratios varied from 1.09 to 1.89, indicating an increase in rates ranging from 9% to 89% compared to the rate of Louisiana (Table 2 and Figure 1).

### Prostate

Of the 469 census tracts meeting the publication criteria, 47 census tracts in 19 parishes had statistically significantly higher prostate cancer incidence rates than the Louisiana statewide rate; rate ratios varied from 1.22 to 2.92, indicating an increase in rates ranging from 22% to 192% compared to the rate of Louisiana (Table 3 and Figure 2).

### Female Breast

Of the 507 census tracts meeting the publication criteria, 33 census tracts in 15 parishes had statistically significantly higher female breast cancer incidence rates than the Louisiana statewide rate; rate ratios varied from 1.25 to 2.06, indicating an increase in rates ranging from 25% to 106% compared to the rate of Louisiana (Table 4 and Figure 3).

### Lung & Bronchus

Of the 848 census tracts meeting the publication criteria, 83 census tracts in 34 parishes had statistically significantly higher lung and bronchus cancer incidence rates than the Louisiana statewide rate; rate ratios varied from 1.32 to 2.59, indicating an increase in rates ranging from 32% to 159% compared to the rate of Louisiana (Table 5 and Figure 4).

### Colon & Rectum

Of 698 census tracts meeting the publication criteria, 52 census tracts in 33 parishes had statistically significantly higher colorectal cancer incidence rates than the Louisiana statewide rate; rate ratios varied from 1.40 to 2.29, indicating an increase in rates ranging from 40% to 129% compared to the rate of Louisiana (Table 6 and Figure 5).

### Kidney & Renal Pelvis

Of 261 census tracts meeting the publication criteria, 37 census tracts in 23 parishes had statistically significantly higher kidney and renal pelvis incidence rates than the Louisiana statewide rate; rate ratios varied from 1.48 to 2.58, indicating an increase in rates ranging from 48% to 158% compared to rate of Louisiana (Table 7 and Figure 6).

### Non-Hodgkin Lymphoma

Of 147 census tracts meeting the publication criteria, 21 census tracts in 15 parishes had statistically significantly higher non-Hodgkin lymphoma incidence rates than the Louisiana statewide rate; rate ratios varied from 1.62 to 3.69, indicating an increase in rates ranging from 62% to 269% compared to the rate of Louisiana (Table 8 and Figure 7).

### Urinary Bladder (including in situ)

Of 160 census tracts meeting the publication criteria, 33 census tracts in 21 parishes had statistically significantly higher urinary bladder incidence rates than the Louisiana statewide rate; rate ratios varied from 1.52 to 2.87, indicating an increase in rates ranging from 52% to 187% compared to the rate of Louisiana (Table 9 and Figure 8).

### Melanoma of the Skin

Of 166 census tracts meeting the publication criteria, 90 census tracts in 18 parishes had statistically significantly higher melanoma of the skin incidence rates than the Louisiana statewide rate; rate ratios varied from 1.46 to 4.72, indicating an increase in rates ranging from 46% to 372% compared to the rate of Louisiana (Table 10 and Figure 9).

### Pancreas

Of 57 census tracts meeting the publication criteria, 9 census tracts in 9 parishes had statistically significantly higher pancreatic cancer incidence rates than the rate in Louisiana; rate ratios varied from 1.65 to 2.39, indicating an increase in rates ranging from 65% to 139% compared to the rate of Louisiana (Table 11 and Figure 10).

### Leukemia

Of 63 census tracts meeting the publication criteria, 11 census tracts in 9 parishes had statistically significantly higher leukemia incidence rates than the rate in Louisiana; rate ratios varied from 1.64 to 2.45, indicating an increase in rates ranging from 64% to 145% compared to the rate of Louisiana (Table 12 and Figure 11).

### Oral Cavity & Pharynx

Of 57 census tracts meeting the publication criteria, 14 census tracts in 12 parishes had statistically significantly higher oral cavity and pharynx cancer incidence rates than the rate in Louisiana; rate ratios varied from 1.61 to 2.57, indicating an increase in rates ranging from 61% to 157% compared to the rate of Louisiana (Table 13 and Figure 12).

### Thyroid

Of 52 census tracts meeting the publication criteria, 17 census tracts in 10 parishes had statistically significantly higher thyroid cancer incidence rates than Louisiana; rate ratios varied from 1.70 to 2.66, indicating an increase in rates ranging from 70% to 166% compared to the rate of Louisiana (Table 14 and Figure 13).

### Corpus Uterus

Of 15 census tracts meeting the publication criteria, 5 census tracts in 4 parishes had statistically significantly higher corpus uterus cancer incidence rates than Louisiana; the rate ratios varied from 1.70 to 2.02, indicating an increase in rates from 70% to 102% compared to the rate of Louisiana (Table 15 and Figure 14).

### Liver & Intrahepatic Bile Duct

Of 14 census tracts meeting the publication criteria, 7 census tracts in 6 parishes had statistically significantly higher liver and intrahepatic bile duct cancer incidence rates than Louisiana; the rate ratios varied from 1.79 to 3.97, indicating an increase in rates ranging from 79% to 297% compared to rate of Louisiana (Table 16 and Figure 15).

### Myeloma

Of 2 census tracts meeting the publication criteria, one census tract a statistically significantly higher myeloma incidence rate when compared to Louisiana; the rate ratio was 2.80, indicating a 180% increase when compared to the rate of Louisiana (Table 17 and Figure 16).

### Stomach

There was one census tract meeting the publication criteria, but it was not statistically significantly higher than Louisiana (Figure 17).

## Tables & Figures

Table 1. Number and percentage of census tracts meeting the publication criteria with statistically significantly higher or lower rates than Louisiana based on cancer cases diagnosed between 2013 and 2022.

	Average Annual Case Count in Louisiana	Census Tracts Meeting the Criteria <sup>1</sup>		Higher Rates		Lower Rates	
		Count <sup>2</sup>	% <sup>3</sup>	Count <sup>4</sup>	% <sup>5</sup>	Count <sup>6</sup>	% <sup>7</sup>

<sup>1</sup>Criteria: population count > 20,000 and case count ≥ 16 cases when combining 2013-2022 data together.

<sup>2</sup>Count of census tracts meeting the reporting criteria

<sup>3</sup>Denominator: total number of census tracts in Louisiana; numerator: number of census tracts meeting the criteria

<sup>4</sup>Count of census tracts with statistically significantly higher incidence rates than the rate of Louisiana

<sup>5</sup>Denominator: total number of census tracts that meet the criteria; numerator: number of census tracts with higher incidence rate than the corresponding rate of Louisiana by individual statistical tests at the significance level of 0.05

<sup>6</sup>Count of census tracts with statistically significantly lower incidence rates than the rate of Louisiana

<sup>7</sup>Denominator: total number of census tracts that meet the criteria; numerator: number of census tracts with lower incidence rate than the corresponding rate of Louisiana by individual statistical tests at the significance level of 0.05

Table 2. Age-adjusted cancer incidence rates by census tract, significantly higher than Louisiana, all types combined, 2013-2022.

\*Rates are per 100,000 and age-adjusted to the 2000 U.S. Std Population (18 age groups - Census P25-1130) standard.

#One or more military areas are located in this census tract.

Table 3. Age-adjusted cancer incidence rates by census tract, significantly higher than Louisiana, Prostate, 2013-2022.

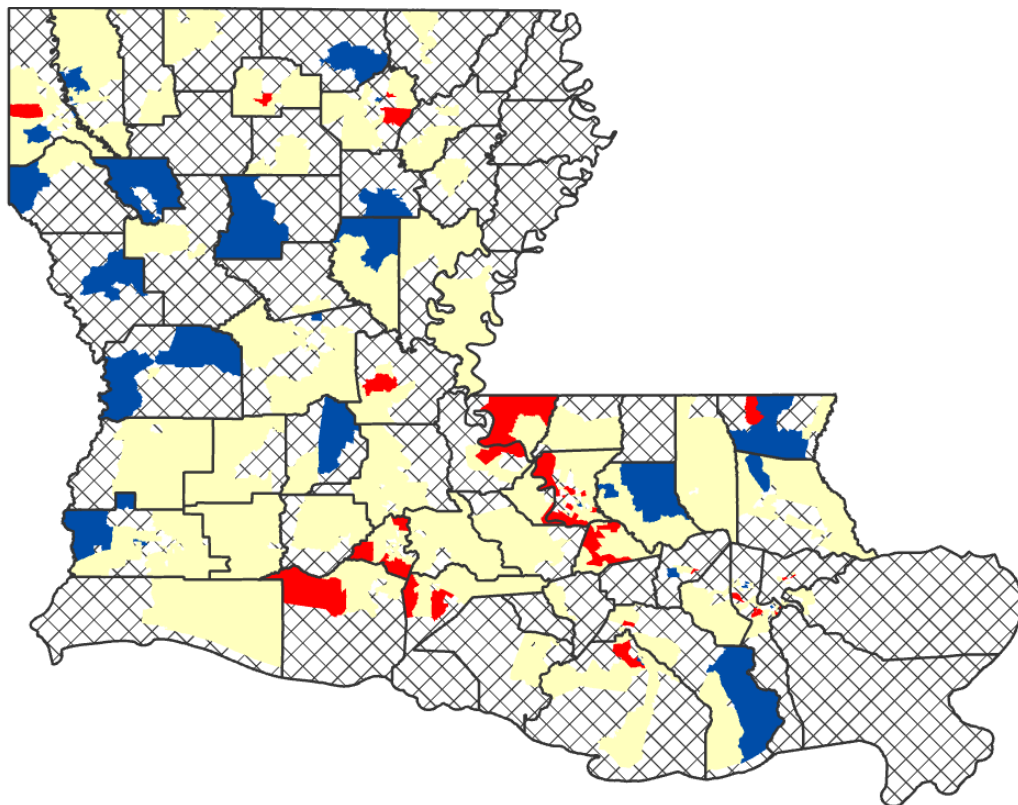

Figure 1. Comparison of Cancer Incidence Rates<sup>1</sup> of Individual Census Tracts with Louisiana, All Cancers Combined, 2013-2022

- The rate is statistically significantly lower than Louisiana
- The rate is not statistically significantly different from Louisiana
- The rate is statistically significantly higher than Louisiana
- The census tract does not meet the requirements (population count > 20,000 and case count  $\geq$  16 for the 2013-2022 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

Figure 2. Comparison of Cancer Incidence Rates<sup>1</sup> of Individual Census Tracts with Louisiana, Prostate, 2013-2022

- The rate is statistically significantly lower than Louisiana.
- The rate is not statistically significantly different from Louisiana.
- The rate is statistically significantly higher than Louisiana.
- The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2013-2022 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

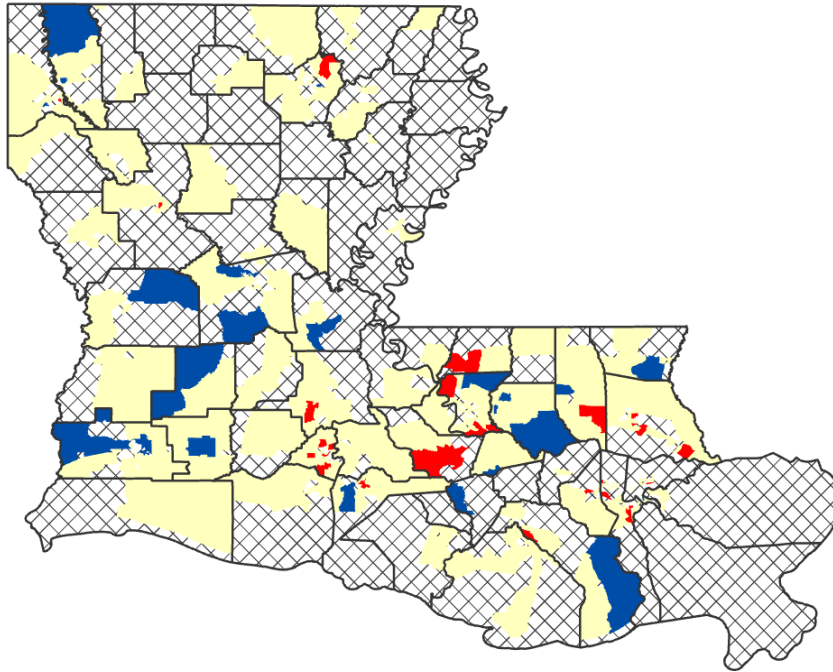

**Risk Factors<sup>2</sup>**

- Increased age (rises rapidly after age 50)
- Race/Ethnicity: African ancestry
- Family history of prostate cancer in first-degree relative
- Certain inherited genetic conditions, including Lynch syndrome and BRCA1 and BRCA2 mutations
- Hormones: increased dihydrotestosterone (DHT) levels
- U.S. and Caribbean geographical locations
- Taking vitamin E alone or folic acid
- Diets high in dairy and calcium
- Chemical exposures: Arsenic

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

<sup>2</sup>American Cancer Society, *Cancer Facts & Figures 2026*; National Cancer Institute, [www.cancer.gov](http://www.cancer.gov).

Figure 3. Comparison of Cancer Incidence Rates<sup>1</sup> of Individual Census Tracts with Louisiana, Female Breast, 2013-2022

- The rate is statistically significantly lower than Louisiana.
- The rate is not statistically significantly different from Louisiana.
- The rate is statistically significantly higher than Louisiana.
- The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2013-2022 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

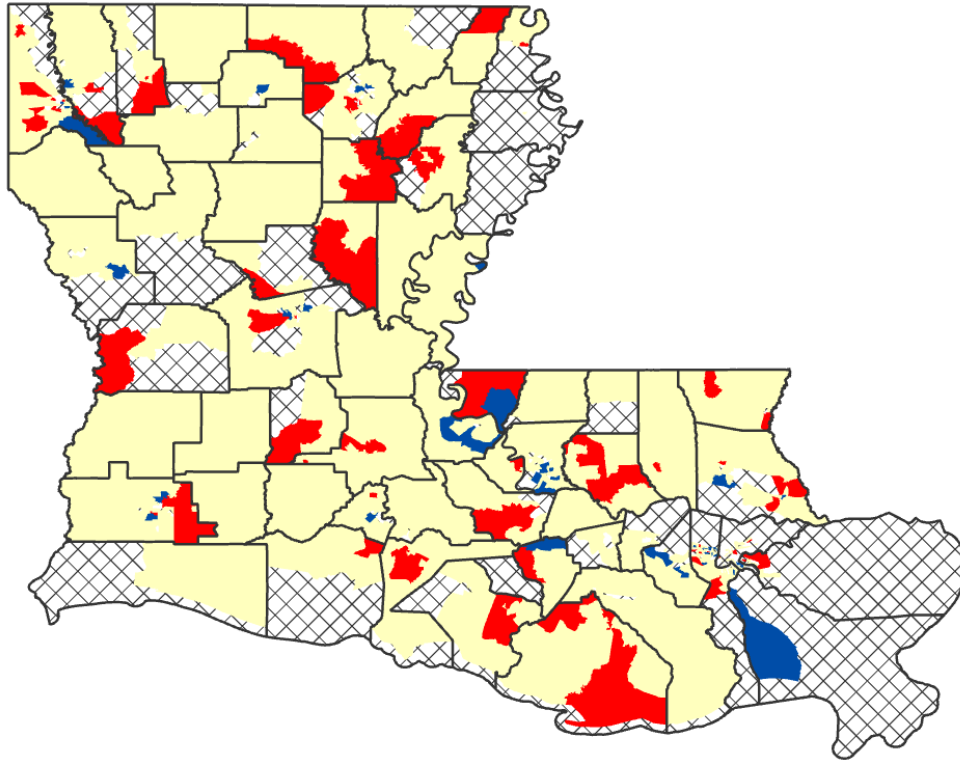

**Risk Factors<sup>2</sup>**

- Increased age
- Race/ethnicity
- Long menstrual history (starting early and ending later in life)
- Inherited mutations in BRCA1/BRCA2, PALB2, CHEK2, TP53, CDH1, PTEN, STK11, or ATM genes
- Personal or family history of breast or ovarian cancer
- Benign breast conditions (ex. atypical hyperplasia)
- Personal history of ductal or lobular carcinoma in situ, high-dose radiation to chest at young age, or high breast density
- Exposure to diethylstilbestrol (DES) before birth (in utero)
- or taking it during pregnancy
- Weight gain after age of 18
- Being overweight or obese
- Height (tall/being taller)
- Physical inactivity
- Alcohol consumption
- Birth Controls that use hormones
- Long-term use of combination hormone replacement therapy
- Postmenopausal hormone use
- Not fully carrying a pregnancy to term
- Having no pregnancies at all
- Older age at first pregnancy
- Increased risk for the first 10 years following childbirth
- Not breastfeeding
- Menopausal hormone therapy (combined estrogen and progesterin)

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

<sup>2</sup>American Cancer Society, *Cancer Facts & Figures 2026*; National Cancer Institute, [www.cancer.gov](http://www.cancer.gov).

Figure 4. Comparison of Cancer Incidence Rates<sup>1</sup> of Individual Census Tracts with Louisiana, Lung & Bronchus, 2013-2022

- The rate is statistically significantly lower than Louisiana.
- The rate is not statistically significantly different from Louisiana.
- The rate is statistically significantly higher than Louisiana.
- The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2013-2022 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

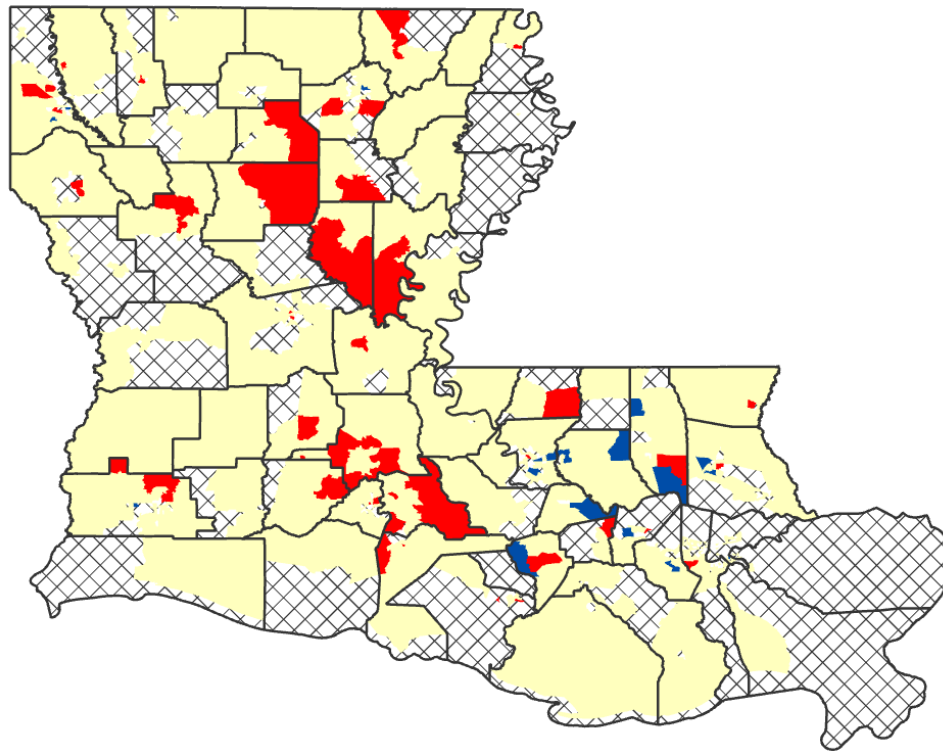

**Risk Factors<sup>2</sup>**

- Age
- Personal or family history of lung cancer
- Certain genetic causes (especially in families with history of lung cancer)
- Radiation therapy to the chest for other cancers
- Imaging tests such as CT scans
- Atomic weapon radiation
- HIV infection
- Air pollution
- Cigarette, cigar, pipe, and menthol cigarette smoking (increases with amount and years of smoking)
- Exposure to secondhand smoke
- Taking beta carotene supplements (especially in smokers who smoke 1+ packs per day)
- Being overweight or not getting enough exercise
- Occupational exposures
- Exposure to radon gas, asbestos, certain metals (chromium, cadmium, arsenic), silica, beryllium, nickel chromate, some organic chemicals, radiation, vinyl chloride, mustard gas, coal products, diesel exhaust, chloromethyl ethers, or tar and soot
- Arsenic in drinking water

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

Figure 5. Comparison of Cancer Incidence Rates<sup>1</sup> of Individual Census Tracts with Louisiana, Colon & Rectum, 2013-2022

■ The rate is statistically significantly lower than Louisiana.

■ The rate is not statistically significantly different from Louisiana.

■ The rate is statistically significantly higher than Louisiana.

■ The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2013-2022 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

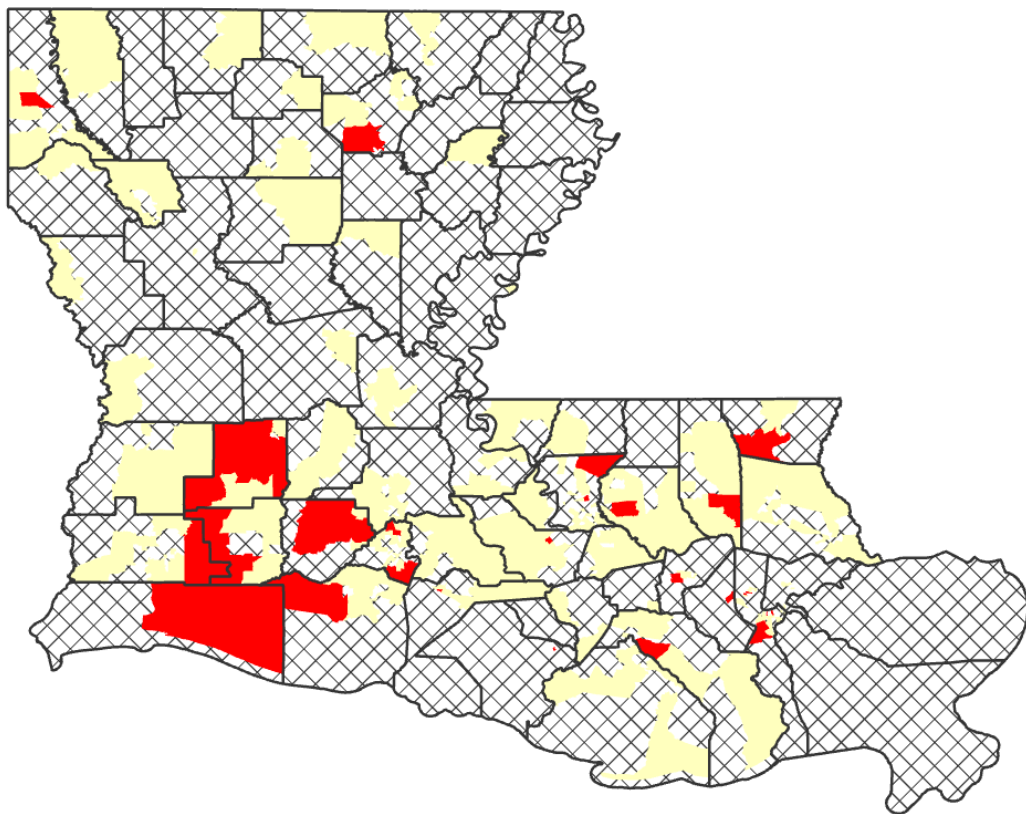

**Risk Factors<sup>2</sup>**

- Increased age: risk increases after age 50
- Race/ethnicity (more common in African Americans, American Indians, Alaska Natives, and Ashkenazi Jews)
- Personal or family history of colon or rectal cancer and/or polyps
- Personal history of chronic inflammatory bowel disease, ulcerative colitis, Crohn's disease, or ovarian cancer
- Inherited genetic conditions (ex. Lynch syndrome, familial adenomatous polyposis, or hereditary nonpolyposis colon cancer)
- Radiation to the abdomen
- or pelvis area as part of previous cancer treatment
- Rare inherited syndrome: Peutz-Jeghers syndrome, MUTYH-associated polyposis (MAP), and cystic fibrosis
- Cholecystectomy (surgical removal of the gallbladder)
- Obesity
- Type II diabetes
- Physical inactivity
- Cigarette smoking
- Moderate - heavy alcohol consumption (3+ drinks per day)
- High consumption of red or processed meat
- Low intake of calcium, fruits, vegetables, and whole-grain fiber

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

Figure 6. Comparison of Cancer Incidence<sup>1</sup> Rates of Individual Census Tracts with Louisiana, Kidney & Renal Pelvis, 2013-2022

- The rate is not statistically significantly different from Louisiana.
- The rate is statistically significantly higher than Louisiana.
- The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2013-2022 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

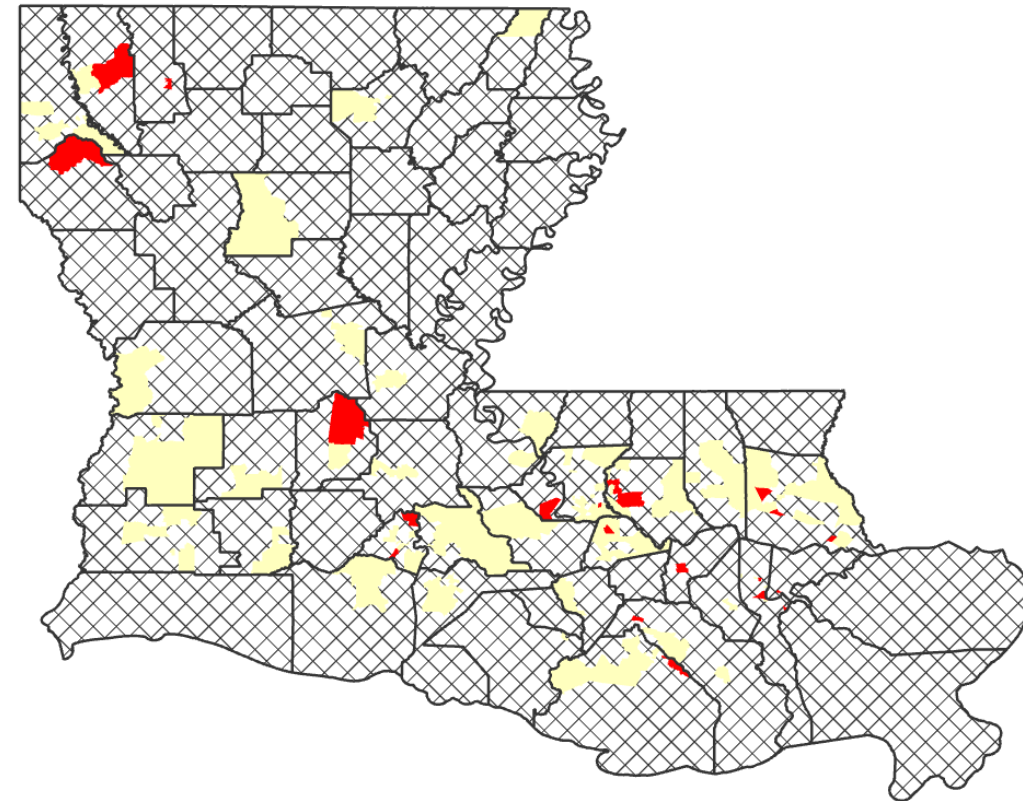

**Risk Factors<sup>2</sup>**

- Obesity
- Cigarette smoking or tobacco use
- Sex
- Race
- High blood pressure
- Family history of kidney cancer
- Genetic and hereditary risk factors including Von-Hippel Lindau syndrome
- Chronic renal failure
- Occupational exposure to chemicals like trichloroethylene or cadmium
- Long-term use of certain pain medicines such as acetaminophen

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

- The rate is not statistically significantly different from Louisiana.
- The rate is statistically significantly higher than Louisiana.
- The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2013-2022 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

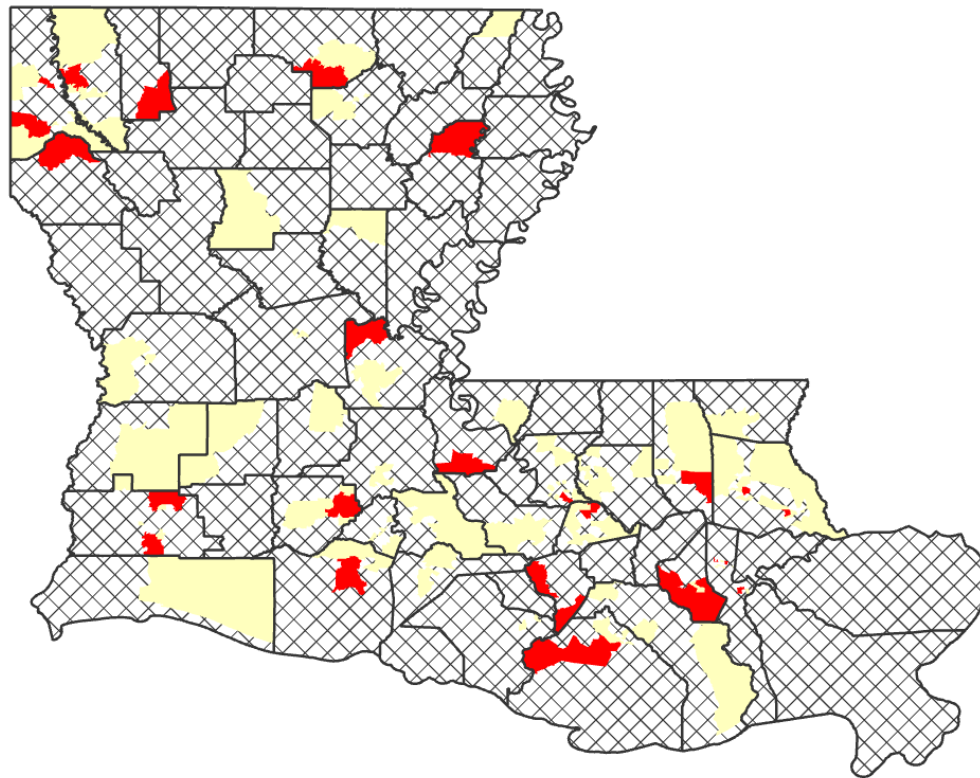

**Risk Factors<sup>2</sup>**

- Increased age
- Sex (Higher risk if assigned male at birth)
- Race/ethnicity (Higher risk if White)
- Weakened immune system due to HIV infection, inherited immunodeficiency syndromes, or receiving immune suppressants to prevent organ transplant rejection
- Infection with Epstein Barr virus, HIV, HTLV-1, H. pylori, or Hepatitis C virus
- Personal history of autoimmune diseases such as Sjogren syndrome, lupus, celiac disease, or rheumatoid arthritis
- Family history of lymphoma in first degree relative
- Exposure to chemicals such as benzene and certain herbicides and insecticides may be associated with NHL; research is ongoing

 The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2013-2022 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

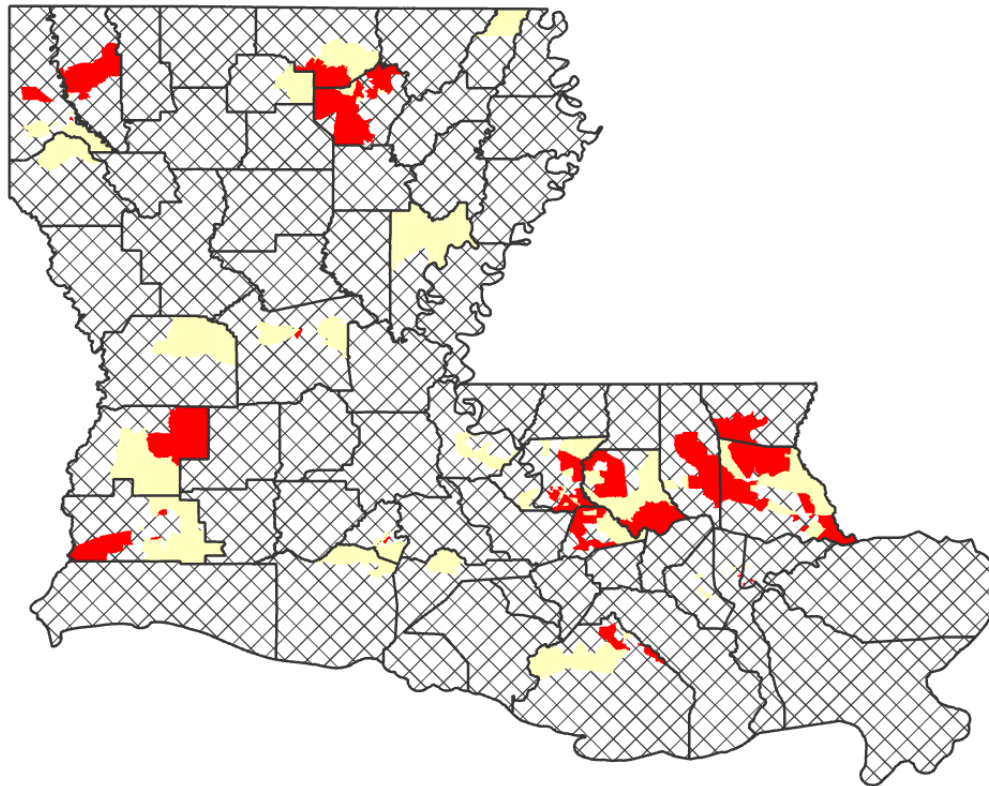

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

<sup>2</sup>American Cancer Society, *Cancer Facts & Figures 2026*; National Cancer Institute, [www.cancer.gov](http://www.cancer.gov).

**Risk Factors<sup>2</sup>**

- Race-ethnicity (Higher risk if White)
- Age (> 55 y/o)
- Sex (Higher risk if assigned male at birth)
- Acquired or inherited gene mutations: GSTM1, HRAS, RB1, PTEN/MMAC1, and NAT2
- Smoking and tobacco use
- Working in the dye, rubber, chemical, metal, textile, leather, or aluminum industries
- Working as a hairdresser, mechanist, printer, painter, or truck driver
- Living in a community with high levels of arsenic in the drinking water
- Bladder birth defects (ex. Exstrophy)
- Cancer treatment with radiation to the pelvis or with chemotherapy drugs such as cyclophosphamide or ifosfamide
- Personal or family history of bladder or other urothelial cancer

<sup>2</sup>American Cancer Society, *Cancer Facts & Figures 2026*; National Cancer Institute, [www.cancer.gov](http://www.cancer.gov).

**Risk Factors<sup>2</sup>**

- Increased age
- Sex (higher risk if assigned male at birth)
- Race (higher risk in White populations)
- Presence of atypical, large, or more than 50 moles
- Heavy exposure to ultraviolet radiation from sunlight or indoor tanning beds
- Having a fair complexion (fair skin that freckles or burns easily, or having natural blonde or red hair, blue or green eyes)
- Personal or family history of melanoma or skin cancer
- Personal history of having at least one severe, blistering sunburn in youth
- Exposure to arsenic

Figure 10. Comparison of Cancer Incidence Rates<sup>1</sup> of Individual Census Tracts with Louisiana, Pancreas, 2013-2022

- The rate is not statistically significantly different from Louisiana.
- The rate is statistically significantly higher than Louisiana.

**Risk Factors<sup>2</sup>**

- Age (older than 45 years)
- Sex (higher risk if assigned male at birth)
- Race (African American at higher risk than White)
- Personal history of chronic pancreatitis or diabetes
- Personal history of Lynch syndrome or certain other genetic syndromes
- BRCA1 and BRCA2 mutation carrier
- Family history of pancreatic cancer
- Chronic pancreatitis
- Smoking and tobacco use
- Cigar and use of smokeless tobacco
- Obesity (BMI>30)
- Type II Diabetes
- Heavy occupation exposure to chemicals used in dry cleaning and metal working industries
- Heavy alcohol consumption

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

The rate is not statistically significantly different from Louisiana.

The rate is statistically significantly higher than Louisiana.

The census tract does not meet the requirements (population count > 20,000 and case count  $\geq$  16 for the 2013-2022 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

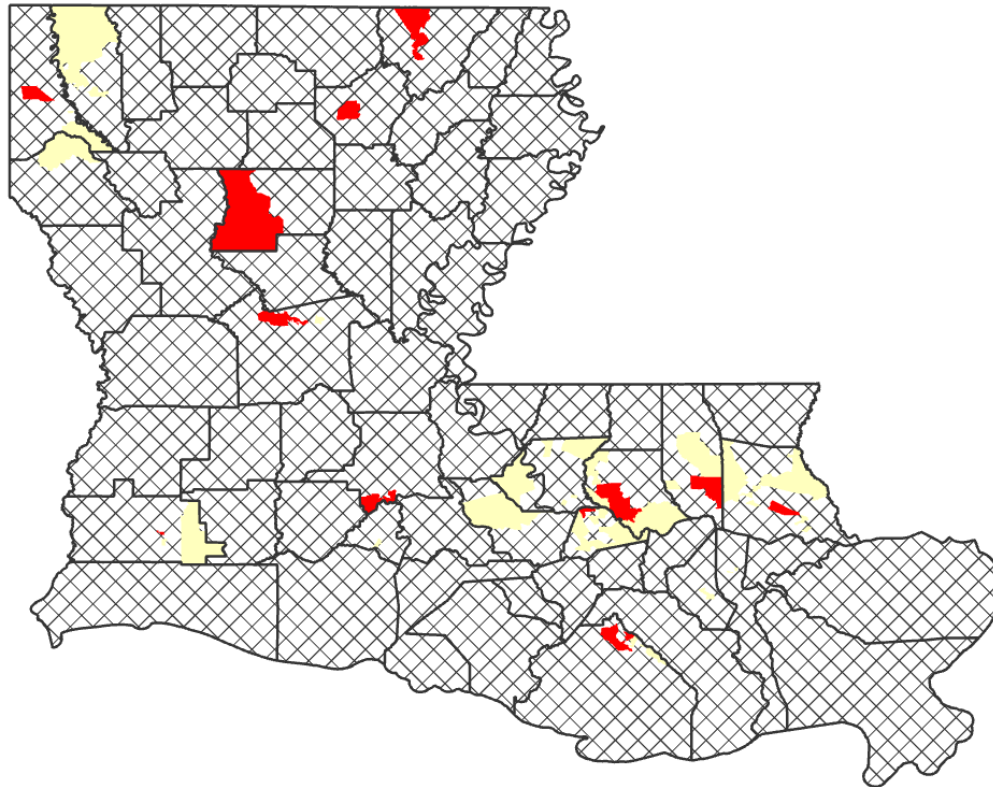

**Risk Factors<sup>2</sup>**

- Age (extremes of life – childhood and >50)
- Sex (Higher risk if assigned male at birth)
- Race (more common in White individuals than African Americans)
- Viral infections (Human T-cell lymphoma/leukemia virus-1, Epstein-Barr virus)
- Exposure to high levels of radiation
- Exposure to chemotherapy for another cancer
- Occupational exposure to benzene or ethylene oxide
- Certain inherited syndromes, such as Down syndrome, Fanconi syndrome, Bloom syndrome, ataxia telangiectasia, Li-Fraumeni syndrome, and Shwachman-Diamond syndrome

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

<sup>2</sup>American Cancer Society, *Cancer Facts & Figures 2026*; National Cancer Institute, [www.cancer.gov](http://www.cancer.gov).

Figure 12. Comparison of Cancer Incidence Rates<sup>1</sup> of Individual Census Tracts with Louisiana, Oral Cavity & Pharynx, 2013-2022

 The rate is not statistically significantly different from Louisiana.

 The rate is statistically significantly higher than Louisiana.

 The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2013-2022 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

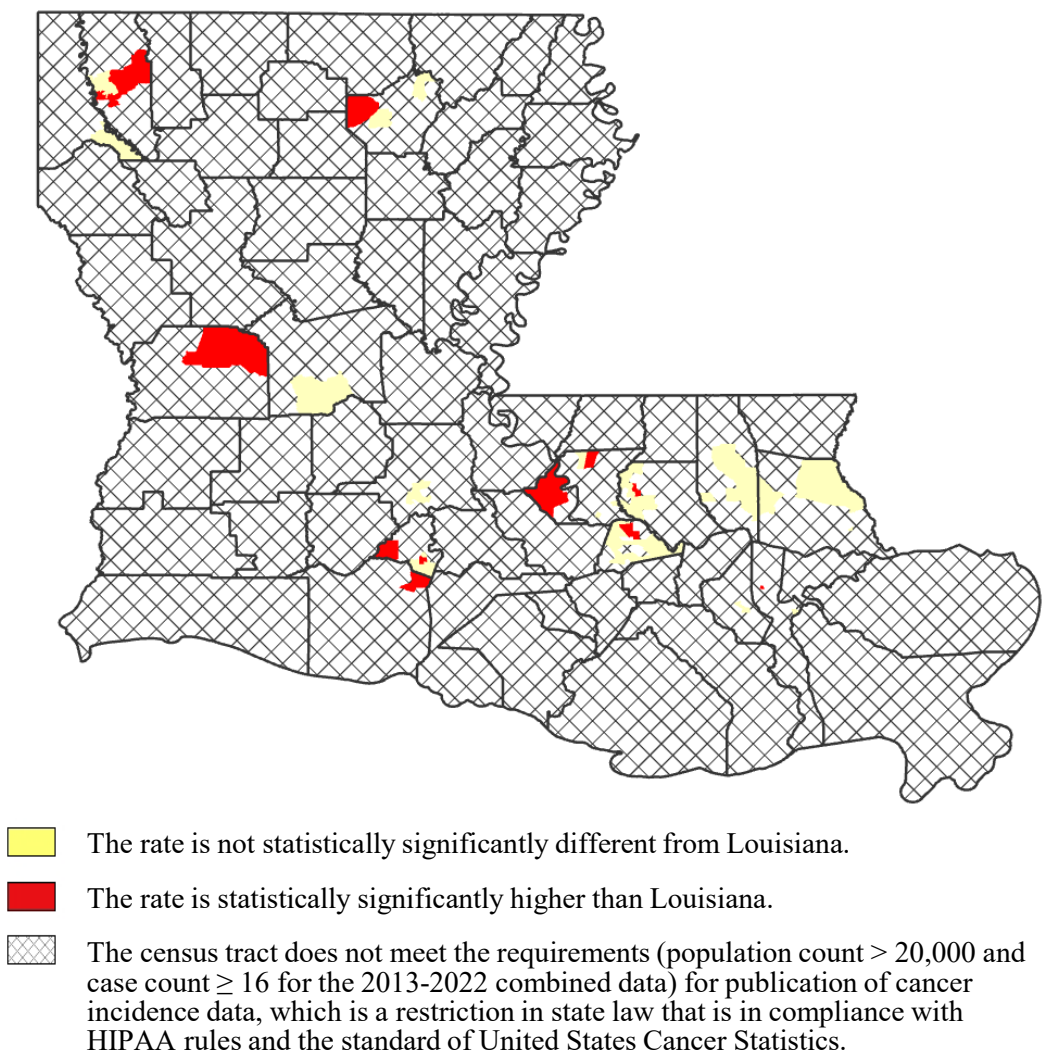

**Risk Factors<sup>2</sup>**

- Age (>55 y/o have higher risk)
- Sex (higher risk if assigned male at birth)
- Personal history of oral cavity and pharynx cancer
- Inherited genetic syndromes: Fanconi anemia or Dyskeratosis congenita
- Diets low in fruits and vegetables)
- Tobacco use (smoked or chewed)
- Excessive alcohol use
- UV exposure, such as by sun exposure
- HPV infection of mouth and throat
- Chronic tongue inflammation such as glossitis, atrophy, hypertrophy, or glossodynia
- Betel nut use and/or Gutka chewing
- Excess body weight

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

<sup>2</sup>American Cancer Society, *Cancer Facts & Figures 2026*; National Cancer Institute, [www.cancer.gov](http://www.cancer.gov).

Figure 13. Comparison of Cancer Incidence Rates<sup>1</sup> of Individual Census Tracts with Louisiana, Thyroid, 2013-2022

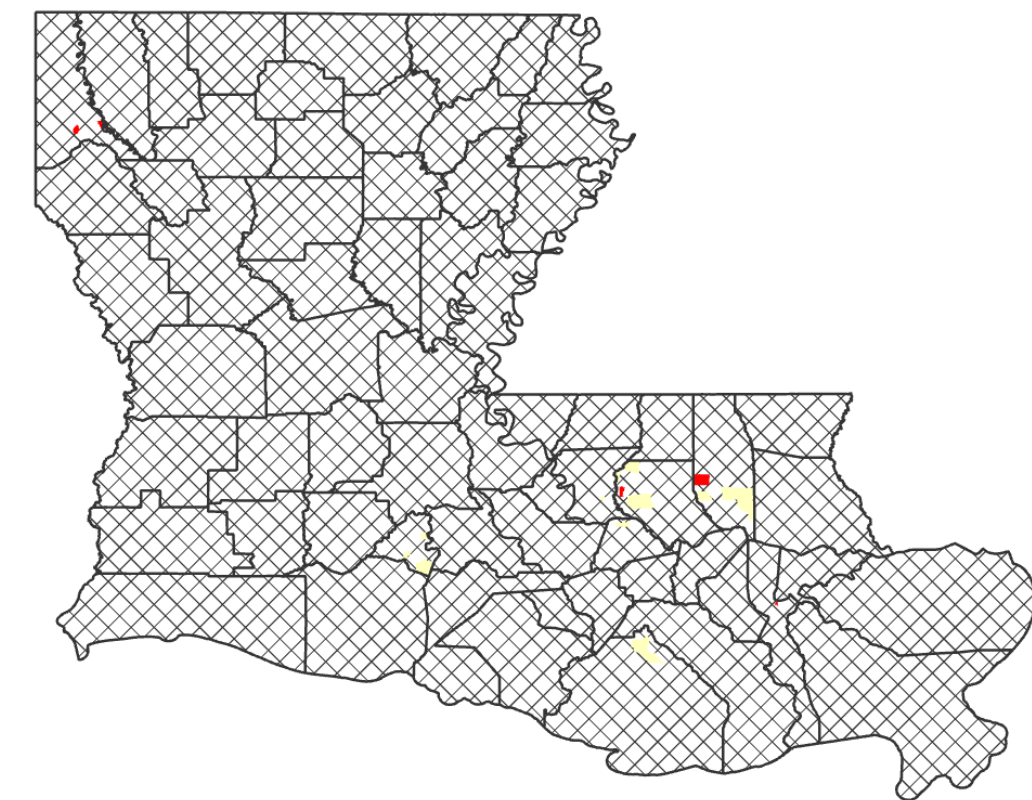

**Risk Factors<sup>2</sup>**

- Sex (Higher risk if assigned female at birth)
- Age (typically >40 y/o)
- Race (Higher risk if Asian)
- Personal history of goiter or thyroid nodules
- Personal history of thyroid cancer
- Family history of thyroid cancer from first-degree relatives
- Hereditary diseases such as multiple endocrine neoplasia type 2 (MEN2A or MEN2B), familial adenomatous polyposis (FAP), Gardner syndrome (subtype of FAP), Cowden syndrome, and Carney complex
- Obesity
- Radiation exposure from imaging tests, medical treatments, and nuclear weapons or power plant accidents
- Diet low in iodine

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

Figure 14. Comparison of Cancer Incidence Rates<sup>1</sup> of Individual Census Tracts with Louisiana, Uterus, 2013-2022

- The rate is not statistically significantly different from Louisiana.
- The rate is statistically significantly higher than Louisiana.
- The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2013-2022 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

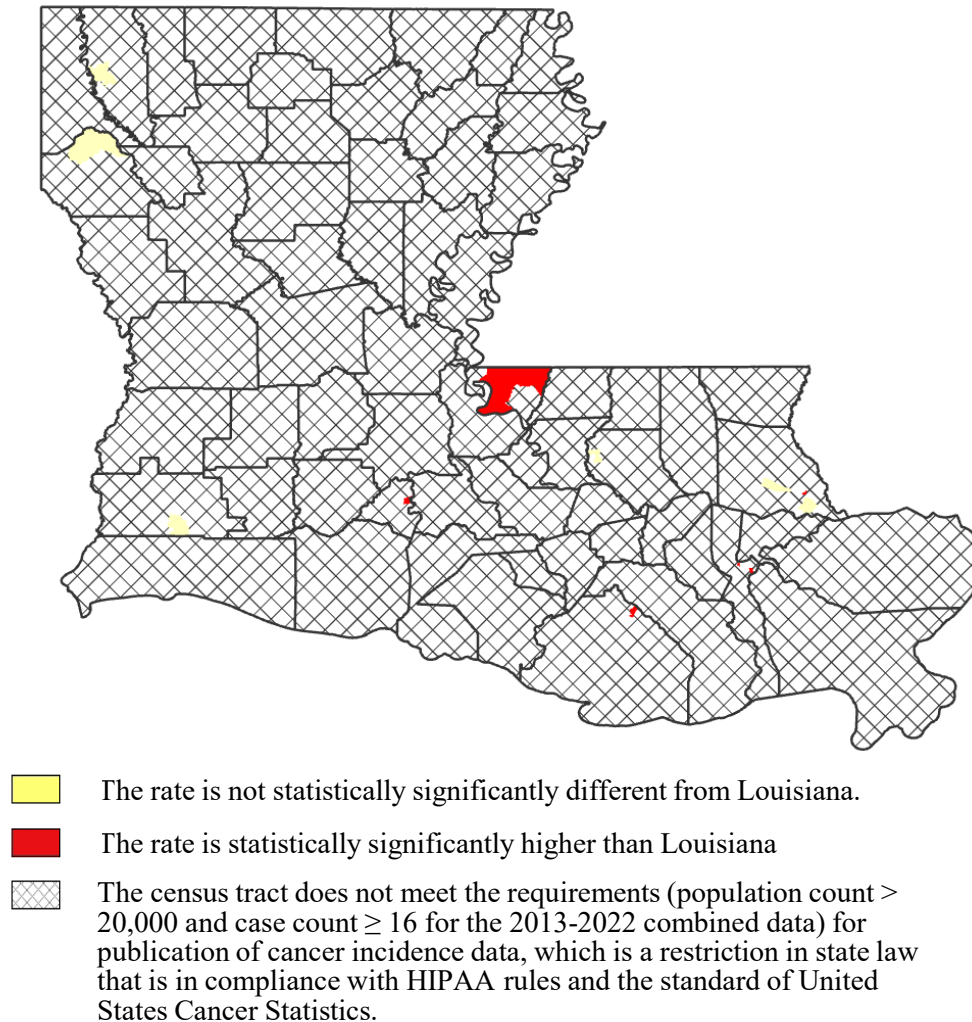

**Risk Factors<sup>2</sup>**

- Age (most common in postmenopausal women)
- Race (Higher risk if White)
- Increased estrogen exposure
- Long menstrual history
- Having no pregnancies at all
- Family history of uterine or colorectal cancer
- Personal history of Lynch syndrome, breast cancer, or ovarian cancer
- Endometrial hyperplasia
- Inherited conditions: Polycystic ovary syndrome (PCOS) and Cowden syndrome
- Pelvic radiation therapy for another cancer
- Obesity (particularly with abdominal fat)
- Increased estrogen exposure
- Use of Tamoxifen
- Metabolic syndrome
- Type II diabetes
- Diets high in fat
- Physical inactivity
- Chemical exposure from hair straighteners

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

Figure 16. Comparison of Cancer Incidence Rates<sup>1</sup> of Individual Census Tracts with Louisiana, Myeloma, 2013-2022

- Risk Factors<sup>2</sup>**
- Increased age (typically 65+ y/o)
  - Sex (Higher risk if assigned male at birth)
  - Race/ethnicity (African American > White)
  - Having other plasma cell disease like monoclonal gammopathy of undetermined significance (MGUS) or solitary plasmocytoma
  - Family history of myeloma
  - Exposure to Agent Orange or similar herbicides and chemicals
  - Obesity
  - Exposure to radiation

 The rate is statistically significantly higher than Louisiana.

 The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2013-2022 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

<sup>2</sup>American Cancer Society, *Cancer Facts & Figures 2026*; National Cancer Institute, [www.cancer.gov](http://www.cancer.gov).

Figure 17. Comparison of Cancer Incidence Rates<sup>1</sup> of Individual Census Tracts with Louisiana, Stomach, 2013-2022

- The rate is not statistically significantly different from Louisiana.
- The census tract does not meet the requirements (population count > 20,000 and case count ≥ 16 for the 2013-2022 combined data) for publication of cancer incidence data, which is a restriction in state law that is in compliance with HIPAA rules and the standard of United States Cancer Statistics.

<sup>1</sup>Average annual age-adjusted (2000 US) incidence rates

<sup>2</sup>American Cancer Society, *Cancer Facts & Figures 2026*; National Cancer Institute, [www.cancer.gov](http://www.cancer.gov).

**Risk Factors<sup>2</sup>**

- Sex (Higher risk if assigned male at birth)
- Age (particularly >60)
- Race/ethnicity (more common among people of color and Native Americans than White people in the US)
- Geography (more common in East Asia, West Asia, Eastern Europe, and South America)
- Certain genetic conditions
- Family history of first-relative stomach cancer
- Inherited gene defects of BRCA1, 2
- Common Variable Immune Deficiency (CVID)
- Medical conditions: chronic H. Pylori infection, Menetrier disease, intestinal metaplasia, chronic atrophic gastritis, pernicious anemia (vitamin B12 deficiency), stomach (gastric) polyps, gastroesophageal reflux disease (GERD)
- Tobacco use
- Alcohol; strongest risk for people consuming 3 or more drinks per day.
- Overweight, obese
- Previous stomach surgeries
- Diet low in fruits and vegetables, high in salted or smoked foods, high in poorly stored or processed foods, high in pickled vegetables, or frequent consumption of grilled or charcoaled meats
- Exposure to very high levels of radiation
- Occupational environment of rubber, metal, or coal industry
- Epstein-Barr virus infection

## Discussion

For the 2013-2022 combined cancer incidence data, LTR identified that 30.7% of the census tracts in Louisiana had statistically significantly higher incidence rates than the entire state for all cancers combined and/or for one or more specific cancer types. When an area is identified as having a higher cancer incidence rate, which is usually an indication of higher cancer risk, the next question is typically “why?” Answering this question requires consideration of multiple factors. First, it is important to understand that cancer is a generic term used to describe a group of related diseases, and elevated cancer incidence is most often attributable to multiple factors. The causes of cancer vary greatly by cancer type ([Appendix C](#)). Some factors, such as age, race, and certain cancer-related genes are non-modifiable, meaning we cannot change them. Others are modifiable, meaning individuals and communities can take measures to reduce or eliminate them. According to the American Association for Cancer Research (AACR), the top modifiable risk factors include tobacco use, excess body weight, alcohol consumption, ultraviolet radiation exposure, poor diet, pathogenic infections, and physical inactivity ([Appendix D](#)). Avoiding these modifiable risk factors will help reduce cancer risk and is often called primary prevention. In addition to these risk factors, the World Health Organization recognizes air pollution as a cancer risk factor.<sup>2</sup> Recent research has provided further evidence that environmental pollution increases the risk not only of lung cancer but also of other cancer types (Turner et al., 2020; De Guzman & Schiller, 2025; Silva et al., 2024; Navarrete-Meneses et al., 2024).

Because some cancer risk factors are not modifiable, some people will develop cancer regardless. The strategy for secondary prevention is adhering to cancer screening guidelines to identify non-cancer growths, such as precancerous lesions that may increase the risk of cancer, and to detect cancer in its early stages. For example, most colorectal cancers begin as a polyp on the inner lining of the colon or rectum. Some types of polyps can develop into cancer over several years. If people comply with cancer screening guidelines to detect and remove polyps, colorectal cancer can be prevented. Another example is the Pap smear, which can detect abnormal cells on the cervix that may develop into cervical cancer if left untreated.

The LTR is the public health entity that counts and publishes cancer data in Louisiana. Cancer registry (surveillance) data provides valuable insight into various aspects of cancer at the population level, including the specific cancer incidence count, rates at which they occur, the distribution of cases by race, sex, and geography to better understand disparities, stage at diagnosis, cancer treatment, cancer survival, etc. While it serves as a crucial resource for understanding the cancer landscape, it alone cannot be used to ascertain the cause of cancer. To determine what caused a higher incidence rate in an area, scientists and public health professionals must gather detailed data from individuals within the affected areas regarding their exposure to known risk factors, such as lifestyle, diet, family history of cancer, environmental exposure, and much more. These efforts are

---

<sup>2</sup> <https://www.who.int/news-room/fact-sheets/detail/cancer>

essential for accurately assessing the impact of individual risk factors and informing effective prevention and intervention strategies. Because of the prolonged latency of cancer development, longitudinal data on risk factor exposure must be necessary. Therefore, such a retrospective investigation is very costly. Upon identification of elevated cancer incidence rates in an area, the Louisiana Office of Public Health (OPH) assumes responsibility for initiating a preliminary evaluation of areas of concern and conducting necessary feasibility studies. Additionally, OPH determines if an etiological investigation is warranted.

The cancer incidence rate in this report indicates the average cancer risk of the residents in a specified census tract. While LTR data may indicate that cancer incidence rates in a census tract are not statistically higher compared to those of Louisiana as a whole, there might be individuals in that census tract who are at an increased risk of cancer due to various exposures to cancer risk factors. Additionally, even after combining 10 years of data together, the population and cancer incidence counts remain relatively small for certain census tracts. Thus, the power to identify statistically significantly higher incidence rates when compared with Louisiana may be constrained. In other simpler terms, the ability of the statistical test to determine whether a rate is significantly higher is dependent upon the size of the population and cancer incidence counts. When these numbers are small, generating reliable cancer incidence rates becomes challenging.

Several limitations of the registry data used for this report need to be disclosed.

- 1) Due to the U.S. Census Bureau only counting individual residents every 10 years, population counts estimated by Woods & Poole Economics, Inc. for the intercensal years based on the 2010 Census were used in this report. Thus, the population may be over or underestimated for some census tracts.
- 2) A fraction of cancer cases (only 1.14% of all cancer cases) was excluded from the calculation of cancer incidence rates at the census tract level due to addresses that could not be geocoded. The exclusion of these cases may result in the underestimation of cancer incidence for certain census tracts.
- 3) The LTR relies on other state cancer registries to provide cancer data on Louisiana residents who were diagnosed or treated at out-of-state facilities (about 2% of cancer cases). The completeness of reporting from these facilities outside of Louisiana cannot be reliably determined.
- 4) Complete ascertainment of all reportable cancer cases is the priority of the LTR. While healthcare facilities and providers are obligated by law to report all cancer cases that they diagnose and/or treat, LTR staff are also actively involved in case-finding activities, especially for hospitals without a cancer registry and non-hospital settings. Using electronic pathology reporting, which covers over 95% of cancer cases, and other quality assurance activities, the LTR can capture the majority of missed cases and achieve the 98% completeness benchmark set by the SEER Program. However, because of small case counts in the individual census tracts, missing just a few cases may bias the statistical results.

- a. A 2020/2021 project conducted in St. John the Baptist Parish called Cancer Reporting in St. John Parish (CRISP) found that all reportable cancer cases identified by area residents were already accounted for in LTR data. The final report can be viewed here: <https://louisianacancer.org/wp-content/uploads/2021/03/CRISP-Final-Report.pdf>.
- 5) Reliable cancer incidence rates and counts stratified by race and gender at the census tract level are not generated due to small case counts. Cancer incidence rates tend to differ based on population characteristics such as race and sex. For example, men usually have a higher rate for all cancers combined than women, and rates of some types of cancer are much higher in certain race groups. Therefore, differences in cancer incidence rates for all races and both genders combined between individual census tracts and the state may be partially attributable to the variations in population characteristics.

To help users better understand the patterns observed in this report, LTR provides access to the Cancer InFocus data visualization platform, which displays cancer incidence at the census-tract level in the context of environmental factors, access-to-care indicators, and socioeconomic characteristics (<https://publichealth.lsuhs.edu/louisiana-tumor-registry/data-usestatistics/louisiana-data-interactive-statistics/cancer-infocus.aspx>). By integrating high-quality registry data with neighborhood-level social determinants of health, this tool allows researchers, policymakers, community organizations, and residents to explore geographic patterns of the cancer burden and better understand the broader conditions in which these patterns occur.

Due to the aforementioned limitations, only a few state cancer registries in the U.S. publish cancer incidence rates at the census tract level. We encourage users to exercise caution in the utilization and interpretation of data presented in this report and strongly recommend consulting with epidemiologists and biostatisticians to mitigate potential misinterpretation. For example, while rate comparisons between each census tract and Louisiana were conducted individually, if multiple comparisons are performed simultaneously, it is essential to control the overall type I error rate. Additionally, when comparing rates among geographic areas, it is important to be mindful that various factors, in addition to true differences in the risk of developing cancer, can contribute to variations in cancer incidence rates. Therefore, geographic differences should be interpreted with caution and should serve as a basis for generating hypotheses.

The primary objective of the LTR is to collect and provide high-quality and complete data to inform cancer control programs, aiding in their efforts to reduce the cancer burden in Louisiana. To achieve this goal, it is imperative that healthcare facilities and providers maintain their commitment to reporting all cancer cases to the LTR. Each reported cancer case holds significant value in ensuring the production of complete data at the census tract level, thereby facilitating informed decision-making and targeted interventions aimed at combating cancer.

## Appendices

## Appendix C. Risk Factors by Cancer Type

The following risk factors *may* increase your risk of these cancers:

Top Cancer Types in Louisiana	Risk Factors
Prostate	<ul style="list-style-type: none"> <li>• Increased age (rises rapidly after age 50)</li> <li>• Race/Ethnicity: African ancestry</li> <li>• Family history of prostate cancer in first-degree relative(s)</li> <li>• Certain inherited genetic conditions, including Lynch syndrome and BRCA1 or BRCA2 mutations</li> <li>• Hormones: increased dihydrotestosterone (DHT) levels</li> <li>• U.S. and Caribbean geographical locations</li> <li>• Taking vitamin E alone or folic acid</li> <li>• Diets high in dairy and calcium</li> <li>• Chemical exposures: Arsenic</li> </ul>
Female Breast	<ul style="list-style-type: none"> <li>• Increased age</li> <li>• Race/ethnicity</li> <li>• Long menstrual history (starting early and ending later in life)</li> <li>• Inherited mutations in <i>BRCA1/BRCA2</i>, <i>PALB2</i>, <i>CHEK2</i>, <i>TP53</i>, <i>CDH1</i>, <i>PTEN</i>, <i>STK11</i>, or <i>ATM</i> genes</li> <li>• Personal or family history of breast or ovarian cancer</li> <li>• Benign breast conditions (ex. atypical hyperplasia)</li> <li>• Personal history of ductal or lobular carcinoma in situ, high-dose radiation to chest at young age (especially when breasts are still developing), benign breast disease, or high breast density</li> <li>• Exposure to diethylstilbestrol (DES) before birth (in utero) or taking it during pregnancy</li> <li>• Weight gain after age of 18</li> <li>• Being overweight or obese after menopause</li> <li>• Height (tall / Being taller)</li> <li>• Physical inactivity</li> <li>• Alcohol consumption</li> <li>• Birth Controls that use hormones</li> <li>• Long-term use of combination hormone replacement therapy</li> <li>• Postmenopausal hormone use</li> <li>• Not fully carrying a pregnancy to term</li> <li>• Having no pregnancies at all</li> <li>• Older age at first pregnancy</li> <li>• Increased risk for the first 10 years following childbirth</li> <li>• Not breastfeeding</li> <li>• Menopausal hormone therapy (combined estrogen and progestin)</li> </ul>
Lung & Bronchus	<ul style="list-style-type: none"> <li>• Age</li> <li>• Personal or family history of lung cancer</li> <li>• Certain genetic causes (especially in families with history of lung cancer)</li> <li>• Radiation therapy to the chest for other cancers</li> <li>• Imaging tests such as CT scans</li> <li>• Atomic weapon radiation</li> <li>• HIV infection</li> <li>• Air pollution</li> <li>• Cigarette, cigar, pipe, and menthol cigarette smoking (increases with amount and years of smoking)</li> <li>• Exposure to secondhand smoke</li> <li>• Taking beta carotene supplements (especially in smokers who smoke 1+ packs per day)</li> <li>• Being overweight or not getting enough exercise</li> <li>• Occupational exposures: rubber manufacturing, paving, roofing, painting, chimney sweeping, radioactive ores such as uranium</li> <li>• Exposure to radon gas, asbestos, certain metals (chromium, cadmium, arsenic), silica, beryllium, nickel chromate, some organic chemicals, radiation, vinyl chloride, mustard gas, coal products, diesel exhaust, chloromethyl ethers, or tar and soot</li> <li>• Arsenic in drinking water</li> </ul>

Top Cancer Types in Louisiana	Risk Factors	
Colon & Rectum	<ul style="list-style-type: none"> <li>• Increased age: risk increases after age 50</li> <li>• Race/ethnicity (more common in African Americans, American Indians, Alaska Natives, and Ashkenazi Jews)</li> <li>• Personal or family history of colon or rectal cancer and/or polyps</li> <li>• Personal history of chronic inflammatory bowel disease, ulcerative colitis, Crohn’s disease, or ovarian cancer</li> <li>• Inherited genetic conditions (ex. Lynch syndrome, familial adenomatous polyposis, or hereditary nonpolyposis colon cancer)</li> <li>• Radiation to the abdomen or pelvis area as part of previous cancer treatment</li> </ul> <ul style="list-style-type: none"> <li>• Rare inherited syndrome: Peutz-Jeghers syndrome, MUTYH-associated polyposis (MAP), and cystic fibrosis</li> <li>• Cholecystectomy (surgical removal of the gallbladder)</li> <li>• Obesity</li> <li>• Type II diabetes</li> <li>• Physical inactivity</li> <li>• Cigarette smoking</li> <li>• Moderate - heavy alcohol consumption (3+ drinks per day)</li> <li>• High consumption of red or processed meat</li> <li>• Low intake of calcium, fruits, vegetables, and whole-grain fiber</li> </ul>	
Kidney & Renal Pelvis	<ul style="list-style-type: none"> <li>• Family history of kidney cancer (highest risk for those who have a sibling with kidney cancer)</li> <li>• Chronic renal failure</li> <li>• Race (African Americans have higher risk)</li> <li>• Sex (Higher risk if assigned male at birth)</li> <li>• Advanced kidney disease (those needing dialysis)</li> <li>• Genetic and hereditary risk factors: Von-Hippel Lindau syndrome, Hereditary papillary renal cell carcinoma, Hereditary leiomyoma-renal cell carcinoma, Birt-Hogg-Dube (BHD) syndrome, Hereditary paraganglioma-pheochromocytoma syndromes, Cowden syndrome, Tuberosclerosis, <i>BAP1</i> tumor predisposition syndrome, Sickle cell trait and disease.</li> </ul> <ul style="list-style-type: none"> <li>• Obesity</li> <li>• Cigarette smoking or tobacco use</li> <li>• High blood pressure</li> <li>• Occupational exposure to chemicals like trichloroethylene or cadmium</li> <li>• Long-term use of certain pain medicines such as acetaminophen</li> </ul>	
Non-Hodgkin Lymphoma	<p><u>Non-Hodgkin Lymphoma in ADULTS:</u></p> <ul style="list-style-type: none"> <li>• Increased age (typically 60s or older)</li> <li>• Sex (Higher risk if assigned male at birth)</li> <li>• Race/ethnicity (Higher risk if White)</li> <li>• Geographical location of residence (more common in developed countries)</li> <li>• Family history of lymphoma in first degree relative</li> <li>• Weakened immune system due to HIV infection, inherited immunodeficiency syndromes, or receiving immune suppressants to prevent organ transplant rejection</li> </ul> <ul style="list-style-type: none"> <li>• Radiation exposure from atomic weapons or nuclear reactor accidents</li> <li>• Radiation exposure from treatment for other cancers (particularly when chemotherapy was also received)</li> <li>• Being overweight or obese</li> <li>• Infection with Epstein Barr virus, Human Immunodeficiency Virus (HIV), Human T-cell lymphotropic virus (HTLV-1), Human herpes virus 8 (HHV-8), <i>Helicobacter pylori</i>, <i>Chlamydomphila psittaci</i>, <i>Campylobacter jejuni</i>, or Hepatitis C virus</li> </ul>	

Top Cancer Types in Louisiana	Risk Factors	
	<ul style="list-style-type: none"> <li>• Personal history of autoimmune diseases such as Sjogren syndrome, lupus, celiac disease, or rheumatoid arthritis</li> <li>• Exposure to chemotherapies used for other cancer treatments</li> </ul>	<ul style="list-style-type: none"> <li>• Breast implants (breast implant-associated anaplastic large cell lymphoma (BIA-ALCL))</li> <li>• Exposure to chemicals such as benzene and certain herbicides and insecticides may be associated with NHL; research is ongoing.</li> </ul>
	<p><u>Non-Hodgkin Lymphoma in CHILDREN/TEENS:</u></p> <ul style="list-style-type: none"> <li>• Personal history of autoimmune diseases such as Sjogren syndrome, lupus, celiac disease, or rheumatoid arthritis</li> <li>• Family history of lymphoma in first degree relative</li> <li>• Infection with Epstein Barr virus or Human Immunodeficiency Virus (HIV)</li> </ul>	<ul style="list-style-type: none"> <li>• Taking immune suppressants to treat autoimmune conditions</li> <li>• Childhood radiation exposure originating from atomic bombs or nuclear reactor accidents, radiation therapy for other cancers, or X-rays and CT scans</li> </ul>
Urinary Bladder	<ul style="list-style-type: none"> <li>• Bladder birth defects (ex. Exstrophy)</li> <li>• Personal or family history of bladder or other urothelial cancer</li> <li>• Race-ethnicity (More common among White populations)</li> <li>• Age (&gt; 55 y/o)</li> <li>• Sex (Higher risk if assigned male at birth)</li> <li>• Acquired or inherited gene mutations: <i>GSTM1</i>, <i>HRAS</i>, <i>RBI</i>, <i>PTEN/MMAC1</i>, and <i>NAT2</i></li> <li>• Inherited genetic syndromes (retinoblastoma, Cowden disease, Lynch syndrome)</li> <li>• Chronic bladder irritation and infections</li> <li>• Cancer treatment with radiation therapy to the pelvis or with chemotherapy drugs such as cyclophosphamide or ifosfamide</li> <li>• Smoking and tobacco use</li> </ul>	<ul style="list-style-type: none"> <li>• Exposure to aromatic amines such as benzidine and beta-naphthylamine</li> <li>• Long-term use of urinary catheters</li> <li>• Working in the dye, rubber, petroleum, chemical, metal, textile, leather or aluminum industries</li> <li>• Working as a hairdresser, machinist, printer, painter, firefighter, or truck driver</li> <li>• Living in a community with high levels of arsenic in the drinking water</li> <li>• Drinking water that has been treated with chlorine</li> <li>• Diabetes medicine, pioglitazone (Actos), linked to increase risk of bladder cancer with higher dosage</li> <li>• Dietary supplements containing aristolochic acid</li> <li>• Not drinking enough water</li> <li>• Having a bladder infection caused by the <i>Schistosoma haematobium</i> parasite (common in Africa and the Middle East, but rare in the U.S.)</li> </ul>
Melanoma of the Skin	<ul style="list-style-type: none"> <li>• Increased age</li> <li>• Sex (Higher risk if assigned male at birth)</li> <li>• Race (Higher risk in White populations)</li> <li>• Presence of atypical, large, or more than 50 moles</li> <li>• Having a fair complexion (fair skin that freckles or burns easily, or having natural blonde or red hair, blue or green eyes)</li> </ul>	<ul style="list-style-type: none"> <li>• Inherited conditions, xeroderma pigmentosum (rare, affect skin cells' ability to repair damage to their DNA) and dysplastic nevus syndrome</li> <li>• Exposure to radiation for treatment for a different disease</li> <li>• Heavy exposure to ultraviolet (UV) radiation from sunlight, indoor tanning beds, and sunlamps</li> </ul>

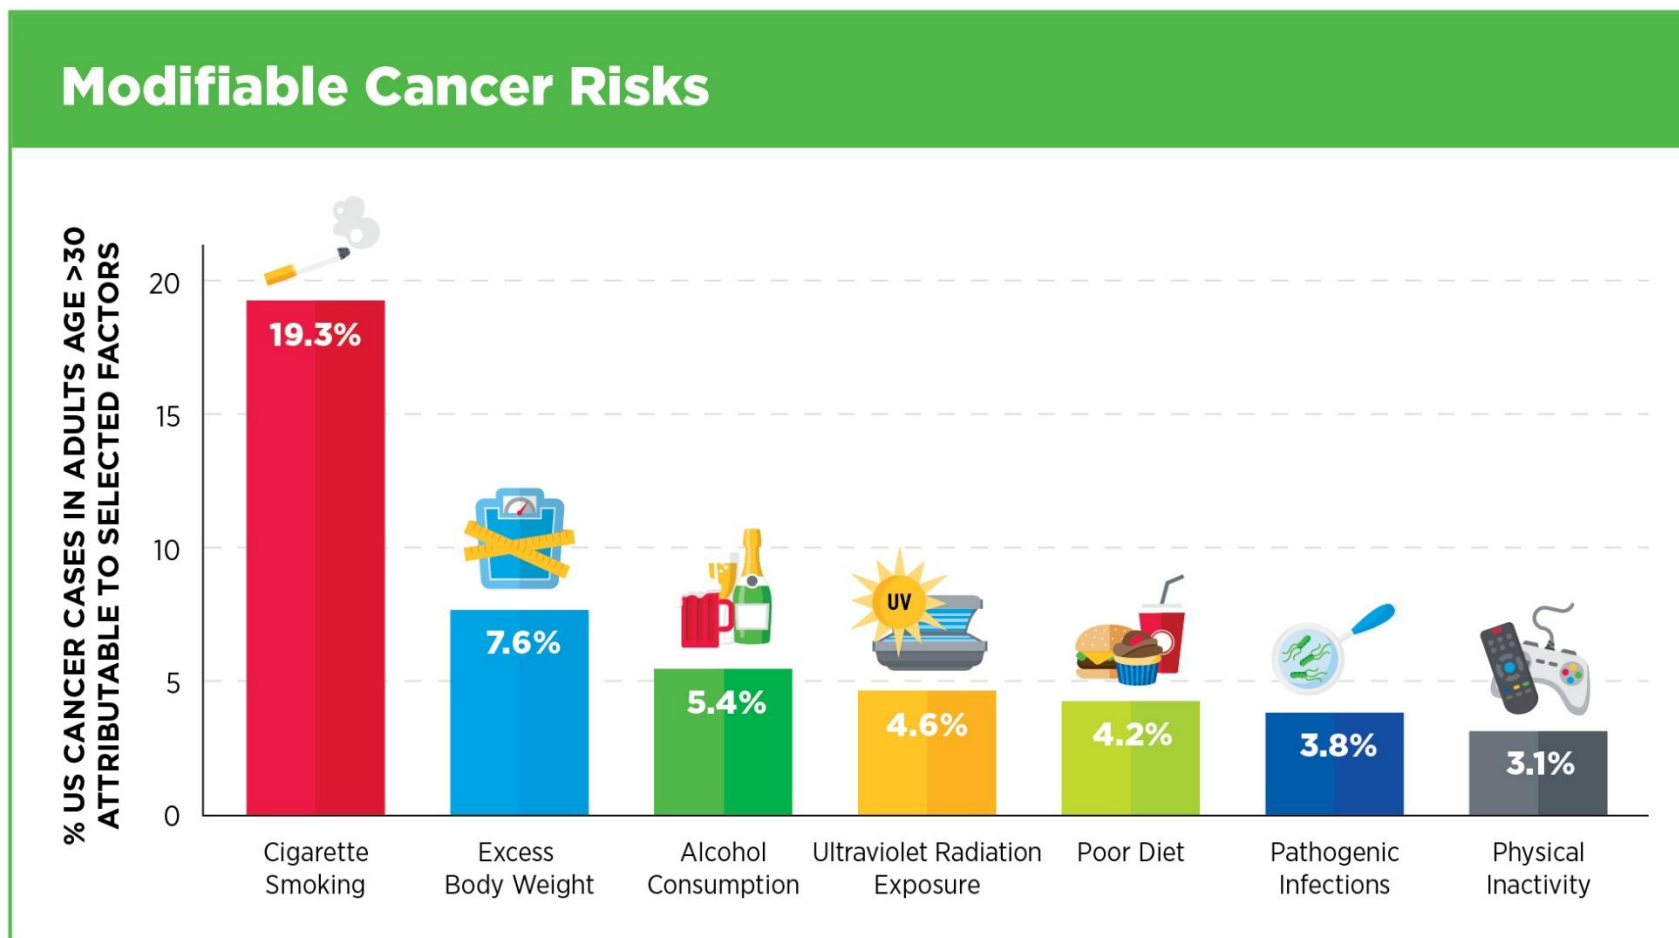

Top Cancer Types in Louisiana	Risk Factors	
	<ul style="list-style-type: none"> <li>Personal or family history of melanoma or other skin cancers</li> <li>Weakened immune system due to HIV infection, certain cancers or taking immune suppressants to prevent organ transplant rejection</li> </ul>	<ul style="list-style-type: none"> <li>Personal history of having at least one severe, blistering sunburn in youth</li> <li>Exposure to arsenic</li> </ul>
Pancreas	<ul style="list-style-type: none"> <li>Age (older than 45 years)</li> <li>Sex (Higher risk if assigned male at birth)</li> <li>Race (African Americans more likely than Whites)</li> <li>Personal history of chronic pancreatitis or diabetes</li> <li>Personal history of certain genetic syndromes <ul style="list-style-type: none"> <li>Inherited Lynch Syndrome (defective <i>MLH1</i> or <i>MSH2</i> genes), familial atypical multiple mole melanoma (FAMMM) syndrome (<i>p16/CDKN2A</i> gene mutation), hereditary pancreatitis (usually caused by <i>PRSS1</i> mutation), ataxia telangiectasia (mutation in <i>ATM</i> gene), and Peutz-Jeghers Syndrome (<i>STK11</i> gene defect)</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li><i>BRCA1</i> and <i>BRCA2</i> and <i>PALB2</i> gene mutation carrier</li> <li>Family history of pancreatic cancer</li> <li>Chronic pancreatitis (due to gene change)</li> <li>Smoking and tobacco use</li> <li>Cigar and use of smokeless tobacco</li> <li>Obesity (BMI&gt;30)</li> <li>Type II diabetes</li> <li>Heavy occupation exposure to chemicals used in dry cleaning and metal working industries</li> <li>Chronic pancreatitis (not due to gene change)</li> <li>Heavy alcohol consumption</li> </ul>
Leukemia ( <i>Shown by Subtype</i> )	<p><u>Acute lymphocytic/lymphoblastic leukemia (ALL) in Adults:</u></p> <ul style="list-style-type: none"> <li>Race/ethnicity (more common in White individuals than African Americans)</li> <li>Age (extremes of life – childhood and &gt;50)</li> <li>Sex (Higher risk if assigned male at birth)</li> <li>Inherited genetic syndromes such as Down syndrome, Fanconi syndrome, Bloom syndrome, ataxia telangiectasia, Li-Fraumeni syndrome, and Shwachman-Diamond syndrome</li> <li>Viral infections (<b>Human T-cell lymphoma/leukemia virus-1, Epstein-Barr virus</b>)</li> </ul>	<ul style="list-style-type: none"> <li>Having an identical twin with ALL</li> <li>Radiation exposure</li> <li>High dose radiation exposure (such as Japanese Atomic Bomb survivors or Chernobyl Nuclear Power Plant disaster survivors)</li> <li>Certain chemotherapy drugs and chemical exposures (benzene)</li> </ul>
	<p><u>Acute myeloid leukemia (AML) in Adults:</u></p> <ul style="list-style-type: none"> <li>Increased age</li> <li>Sex (Higher risk if assigned male at birth)</li> <li>Blood disorders such as myelodysplastic syndrome and chronic myeloproliferative disorders</li> <li>Inherited genetic disorders such as Fanconi anemia, Bloom syndrome, ataxia telangiectasia, Diamond-</li> </ul>	<ul style="list-style-type: none"> <li>Treatment with certain chemotherapy drugs (alkylating agents and topoisomerase II inhibitors)</li> <li>High dose radiation exposure (such as Japanese Atomic Bomb survivors or Chernobyl Nuclear Power Plant disaster survivors)</li> <li>Radiation treatment for cancer</li> </ul>

Top Cancer Types in Louisiana	Risk Factors	
	<p>Blackfan anemia, Shwachman-Diamond syndrome, Li-Fraumeni syndrome, neurofibromatosis type 1 (NF1), Kostmann syndrome, Down syndrome, and trisomy 8</p> <ul style="list-style-type: none"> <li>• Family history of AML</li> </ul>	<ul style="list-style-type: none"> <li>• Smoking</li> <li>• Exposure to certain chemicals, such as formaldehyde and benzene</li> </ul>
	<p><u>Chronic lymphocytic leukemia (CLL) in Adults:</u></p> <ul style="list-style-type: none"> <li>• Age (especially &gt;50)</li> <li>• Sex (Higher risk if assigned male at birth)</li> <li>• Family history of CLL (especially in first-degree relatives)</li> <li>• Race/ethnicity</li> </ul>	<ul style="list-style-type: none"> <li>• Exposure to Agent Orange or certain pesticides</li> <li>• Genetic factors</li> <li>• Personal history of monoclonal B-cell lymphocytosis (MBL)</li> </ul>
	<p><u>Leukemia in Children:</u></p> <ul style="list-style-type: none"> <li>• Genetic syndromes such as Down syndrome and Li-Fraumeni syndrome, bone marrow failure syndromes, and Noonan syndrome</li> <li>• Having neurofibromatosis type 1 (NF1)</li> <li>• Inherited immune system deficiencies</li> <li>• Having a sibling with leukemia (higher risk if identical twin)</li> <li>• Exposure to high levels of radiation</li> </ul>	<ul style="list-style-type: none"> <li>• Exposure to low level radiation (from diagnostic imaging tests)</li> <li>• Exposure to chemotherapy for another cancer</li> <li>• Certain chemotherapy drugs such as cyclophosphamide, doxorubicin, etoposide, and teniposide</li> <li>• Exposure to some chemicals such as benzene</li> <li>• Immunosuppressant use (such as after an organ transplant)</li> </ul>
Oral Cavity & Pharynx	<ul style="list-style-type: none"> <li>• Age (&gt;55y/o have higher risk)</li> <li>• Sex (Higher risk if assigned male at birth)</li> <li>• Personal history of oral cavity and pharynx cancer</li> <li>• Inherited genetic syndromes: Fanconi anemia or Dyskeratosis congenita</li> <li>• Diets low in fruits and vegetables</li> <li>• Tobacco use (smoked or chewed)</li> <li>• Excessive alcohol use</li> <li>• Use of both tobacco and alcohol increases risk even more</li> </ul>	<ul style="list-style-type: none"> <li>• UV exposure, such as by sun exposure</li> <li>• HPV infection of mouth and throat</li> <li>• Chronic tongue inflammation such as glossitis (tongue inflammation), atrophy (tongue thinning), hypertrophy (tongue enlargement), or glossodynia (chronic burning pain)</li> <li>• Betel quid and/or Gutka chewing</li> <li>• Excess body weight</li> <li>• Poor nutrition/diet low in fruits and vegetables</li> </ul>
Thyroid	<ul style="list-style-type: none"> <li>• Sex (Higher risk if assigned female at birth)</li> <li>• Age (typically &gt;40 y/o)</li> <li>• Race (Higher risk if Asian)</li> <li>• Personal history of goiter or thyroid nodules</li> <li>• Personal history of thyroid cancer</li> </ul>	<ul style="list-style-type: none"> <li>• Obesity</li> <li>• Radiation exposure from imaging tests, medical treatments, and nuclear weapons or power plant accidents</li> <li>• Diet low in iodine</li> </ul>

Top Cancer Types in Louisiana	Risk Factors
	<ul style="list-style-type: none"> <li>• Family history of thyroid cancer from first-degree relatives</li> <li>• Hereditary diseases such as multiple endocrine neoplasia type 2 (MEN2A or MEN2B), familial adenomatous polyposis (FAP), Gardner syndrome (subtype of FAP), Cowden syndrome, and Carney complex</li> </ul>
Corpus Uterus	<ul style="list-style-type: none"> <li>• Age (most common in postmenopausal women)</li> <li>• Race (Higher risk if White)</li> <li>• Increased estrogen exposure through: <ul style="list-style-type: none"> <li>○ Early menstruation or late menopause</li> <li>○ History of polycystic ovary syndrome (PCOS)</li> </ul> </li> <li>• Long menstrual history (e.g. starting menstruation at a young age and going through menopause at a late age)</li> <li>• Having no pregnancies at all</li> <li>• Family history of uterine or colorectal cancer</li> <li>• Personal history of Lynch syndrome, breast cancer, or ovarian cancer</li> <li>• Endometrial hyperplasia</li> <li>• Inherited conditions: Polycystic ovary syndrome (PCOS) and Cowden syndrome</li> </ul> <ul style="list-style-type: none"> <li>• Pelvic radiation therapy for another cancer</li> <li>• Obesity (particularly with abdominal fat)</li> <li>• Increased estrogen exposure through: <ul style="list-style-type: none"> <li>○ use of estrogen-only hormone therapy in postmenopausal women</li> <li>○ estrogen-secreting ovarian tumors</li> </ul> </li> <li>• Use of Tamoxifen to prevent or treat breast cancer</li> <li>• Metabolic syndrome</li> <li>• Type II diabetes</li> <li>• Diets high in fat</li> <li>• Physical inactivity</li> <li>• Chemical exposure from hair straighteners (relaxers)</li> </ul>
Liver & Intrahepatic Bile Duct	<ul style="list-style-type: none"> <li>• Sex (Higher risk if assigned male at birth)</li> <li>• Race/ethnicity (highest rates among Asian Americans and Pacific Islanders)</li> <li>• Genetic conditions: Hereditary Hemochromatosis (HH), Tyrosinemia, Alpha-1 antitrypsin deficiency, Porphyria cutanea tarda, Glycogen storage disease, Wilson disease</li> <li>• Cirrhosis of the liver and metabolic dysfunction-associated steatotic liver disease (MASLD; also known as non-alcoholic fatty liver disease)</li> </ul> <ul style="list-style-type: none"> <li>• Personal history of non-alcoholic steatohepatitis (NASH)</li> <li>• Tobacco use</li> <li>• Heavy alcohol consumption</li> <li>• Obesity</li> <li>• Chronic Hepatitis B virus or Hepatitis C virus infections</li> <li>• Exposure to aflatoxin B1, vinyl chloride, or thorium dioxide</li> <li>• Anabolic steroids</li> <li>• Type II diabetes</li> </ul>
Myeloma	<ul style="list-style-type: none"> <li>• Increased age (typically 65+ y/o)</li> <li>• Sex (Higher risk if assigned male at birth)</li> <li>• Race/ethnicity (African American&gt;White)</li> <li>• Having other plasma cell disease like monoclonal gammopathy of undetermined significance (MGUS) or solitary plasmocytoma</li> </ul> <ul style="list-style-type: none"> <li>• Family history of myeloma</li> <li>• Exposure to Agent Orange or similar herbicides and chemicals</li> <li>• Obesity</li> <li>• Exposure to radiation</li> </ul>
Stomach	<ul style="list-style-type: none"> <li>• Sex (Higher risk if assigned male at birth)</li> <li>• Age (particularly &gt;60)</li> </ul> <ul style="list-style-type: none"> <li>• Tobacco use</li> </ul>

Top Cancer Types in Louisiana	Risk Factors
	<ul style="list-style-type: none"> <li>• Race/ethnicity (more common among people of color and Native Americans than White people in the US)</li> <li>• Geography (more common in East Asia, West Asia, Eastern Europe, and South America)</li> <li>• Genetic conditions: Type A blood, Li-Fraumeni syndrome, FAP, GAPPs, Lynch Syndrome, Peutz-Jeghers syndrome, hereditary diffuse gastric cancer</li> <li>• Family history of first-relative stomach cancer</li> <li>• Inherited gene defects of <i>BRCA1, 2</i></li> <li>• Common Variable Immune Deficiency (CVID)</li> <li>• Medical conditions: chronic <i>H. Pylori</i> infection, Menetrier disease, intestinal metaplasia, chronic atrophic gastritis, pernicious anemia (vitamin B12 deficiency), stomach (gastric) polyps, gastroesophageal reflux disease (GERD)</li> </ul> <ul style="list-style-type: none"> <li>• Alcohol; strongest risk for people consuming 3 or more drinks per day.</li> <li>• Overweight, obese</li> <li>• Previous stomach surgeries</li> <li>• Diet low in fruits and vegetables, high in salted or smoked foods, high in poorly stored or processed foods, high in pickled vegetables, or frequent consumption of grilled or charcoaled meats</li> <li>• Exposure to very high levels of radiation</li> <li>• Occupational environment of rubber, metal, or coal industry</li> <li>• Epstein-Barr virus infection</li> </ul>

The Louisiana Tumor Registry was officially founded in 1974 when it joined the CDC's National Program of Cancer Registries. However, the Louisiana Tumor Registry's roots stem back to 1947 when Charity Hospital Tumor Registry began cancer registration. The LTR's original catchment area included 3 parishes: Jefferson, Orleans, and St. Bernard. In 1979, the LTR was transferred to the Louisiana Office of Public Health, which expanded the LTR's catchment area to 35 parishes in Southeast Louisiana. In 1989, the remaining 29 parishes were added, achieving statewide coverage. The LTR was transferred to the LSU Board of Supervisors in 1995, where it remains to this day. In 2001, the LTR was selected to join the NCI's Surveillance, Epidemiology, and End Results (SEER) program. Today, LTR is part of a network of 21 cancer registry members of the prestigious SEER program.

The LTR is nationally recognized and among the top cancer registries in the U.S. The LTR has received Gold Certificates from the North American Association of Central Cancer Registries since 1997, met all standards for the CDC's National Program of Cancer Registries since 1998, received 1st place awards for data quality from the NCI's SEER program since 2009, and many other achievements.
