Race

Symptoms of Non-Hodgkin Lymphoma Include:¹

- Enlarged Lymph Nodes
- Swollen Abdomen
- Fever and Chills
- Chest Pains
- Weight Loss
- Shortness of Breath
- Fatigue
- Easily Bruising or Bleeding

There is no known way to prevent Non-Hodgkin Lymphoma development. Survival odds are best when diagnosed early. If any of the above symptoms occur with no other explanation, consult your physician.

9 in 10 People diagnosed at a localized stage will survive at least 5 years

6 in 10 People diagnosed at a distant stage will survive at least 5 years

Less than
3 in 10
new cases were found
at early stages
(localized) in Louisiana

Non-Hodgkin Lymphoma is most
commonly diagnosed in Louisiana
in persons over age 65

STAGE AT DIAGNOSIS DISTRIBUTION

¹ American Cancer Society. Non-Hodgkin Lymphoma, 2026

² State Cancer Profiles, National Cancer Institute and Centers for Disease Control and Prevention, 2026

⁺ Survival estimates are based on cases diagnosed 2012-2022 and followed through 2023

[#] Prevalence counts are an estimate of the number of survivors on 1/1/2023 who were diagnosed between 2000-2022

LOUISIANA TUMOR REGISTRY

OUR MISSION

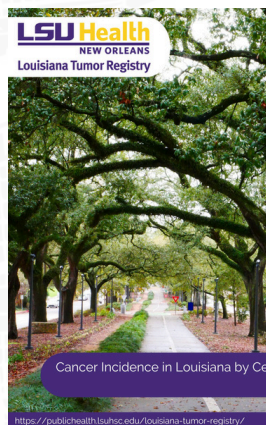

OUR VISION

ANNUAL REPORTS

One of 22 NCI-designated SEER cancer registries that gather information about cancer cases to help guide policies for cancer prevention, early detection, diagnosis, treatment, prognosis and survivorship.

To collect and report complete, high-quality, and timely population-based cancer data in Louisiana to support cancer research, control, and prevention.

To reduce suffering and death from cancer using information collected by the Louisiana Tumor Registry.
